Director's Message

Mr Kai-Yin Ip, founder of Precision Mastech Enterprises was a true spirit from Hong Kong. His envisions for the electrical testing industry and business came alive whilst sitting at the Kowloon Pier in front of the Victoria Harbor.

The business started in a small and flat-planned industrial building where Mr. Ip and his founding team built the Mastech business from ground up and by 1998, our manufacturing facility which focuses mainly on housing and plastic parts and cables and metal parts for both our injection workshop and metal workshop. With this business execution and expansion, Mastech soon had its foot-stamp on the world map and are well known for its quality and reliability.

With 30 years of technical knowledge alongside a group of young sales team, Mastech soon developed a reputation for excellence:

- Excellence in providing **Customer Service**
- Excellence in providing **Solution-based strategy** to all our partners
- Excellence in **Innovation** in both our products and our solutions
- Excellence in building **Long-term Partnerships**
- Excellence in creating a **Business-Friendly culture**
- Excellence in genuine **Cooperation**

With the remodeling of the Mastech business model in 2010, it has now expanded its footsteps onto the world map with a 92,000 square feet factory in China since 2016, a 34,000 square feet office and warehouse set up in North & Central America, an office located in Mexico and a whopping 130,000 square feet office and warehouse in Spain.

These locations and upgraded facility in our engineering lab, automated production lines and SMT Lines allows us to become the fastest, most efficient and most of all, the most results driven business partner in our industry.

This new business model allows all our partners to enjoy:

- Increase Lead Time (meaning decreased waiting time)
- Increased budget-spend on MOQ (meaning less pressure on minimum orders)
- Increased value on Costing (meaning decreased operating cost)
- Increased Post Sale Services (meaning partners are able to enjoy a seamless buying experience)

Mastech shall at all times adhere to all your needs and requirements, even at the most challenging of times.

Mastech shall continue to strive to advance our technologies and developments in these forever evolving times.

Mastech shall endure the ultimate test to sustain growth, superior performances and exceptional deliveries.

Come and experience the Mastech journey.

Jackie Ip
Managing Director

The Sales Team

Mastech Sales Team is committed to provide 100 % effort in customer services in terms of: Presentations, Post Customer Service, Fulfillments, Logistics, Technical Support, and After Service.

Mastech has successfully established more than 200 global strategic partners globally with double digit growth annually We have been a trusted supplier of branded test instruments for the past 30 years with the experience and our quality of service, we are confident to exceed your expectation.

Mastech Products

Mastech focuses on providing the best quality and innovative product with the best service to our customers. With our rich product line and continuous effort of product upgrades and improvement, we are proud to offer a full range of products from Digital

Multimeters, Digital Clamp Meters, Voltage Testers, Plug Testers, and all range of Environ-mental Testers to our valued customers.

Our products are suitable but not limited to: DIY market, educational institutions, electricians, laboratories (R&D), and construction industries.

In addition, safety and quality is our top concern in product development. Our R&D and production are in strict compliance with International Electrotechnical Commission (IEC) following both safety standards and environmental standards with certification of CE, ETL, UL, GS.

We strongly believe a solid foundation is the key to expansion in the global market.

ODM (Original Design Manufacturer)

Any bright ideas? Let us know! As a leading supplier in the field, other than Mastech's original product line, we also offer our knowledge and technologies to help our customers in making their dream tools.

With 30 years of experience and the capability to provide homemade tools and parts, we offer professional assistance to guide customers through the development process from spec setting, industrial design, tooling, mock-up samples and testing.

We understand you are the expert in your market and you know your customers more than we do. Therefore, we are here to provide our best support and share our experience to build the best product for you.

Any bright ideas? Let us know, and we will make it happen!

	100Ω	±5%
	1000Ω	±5%
Voltage to Earth Features	30V(AC)	±5%

Features	
Measurement System	Earth Resistance : By Constant Current Inverter 800Hz approx, 2mA Earth Voltage: By Rectifier Type 5kΩ/V approx, 40~50Hz
Withstand Voltage	1500V AC for one minute between electrical circuit and housing case.
Self-Check Facility	Lead wire connection to C and P terminals and proper auxiliary earth resistance can be checked by pressing "BATT.CHECK" button. "OK" lamp is illuminated.

Insulation Resistance Test

Cable Test

Rc: insulation resistance of the insulation material for high-voltage cables. (between core and metal shielding layer)
 Rs: insulation resistance of the protective layer for high-voltage cables. (between metal shielding layer and earth)
 Rn: insulation resistance between the insulation device or high-voltage equipment and earth. Interference from Rs and Rn is eliminated, and only Rc is tested.

► True RMS Characteristics

- For non-sinusoidal signal measurement, the meter provides more accurate measurement than the traditional averaging method.
- If in AC current mode, the meter may display a random reading between 1 and 50 when the input is not active. This will not affect the accuracy if measurement.
- True RMS requires a minimum input level, AC current or voltage should be 2%~100% of the maximum level.

Accessories Included

- True RMS requires a minimum input level, AC current or voltage should be 2%~100% of the maximum level.

▶ Dual Impedance Characteristics

- Normal impedance (10M) with normal testing capabilities.
- Low impedance Lo-Z (400kΩ) for testing where "ghost voltage" may be present.
- Ghost voltage can occur when power supply conductors and adjacent unused conductors create a capacitance coupling between conductors. If this possibility exists or when testing for the presence of voltage, use the Lo-Z mode to switch to the low impedance setting to remove the ghost voltages during measurement.

It is the best choice for you to have a non-invasive and non-destructive way to aid early detection of potentially big problems.

- Pipework

Infrared thermography is a great tool for detecting faults in pipes and insulation. Heat exchangers are regularly checked with infrared to detect blocked pipes. A thermal imaging can quickly give an overview of the entire installation and it can expedite inspection of the equipment.

- Locate electrical problems

Infrared thermography makes technician or electrician easy to detect the issues with electrical connections, wiring or other system components, as they are clearly highlighted as "hot spots" with thermal imaging. You can clearly see the overheated connections on the thermal image.
