

# ThermoTrack

## Digital Thermometer with Real-Time Tracking and Reporting

### Solar-Powered

No wiring required. Transmits temperature and location every 60 minutes

#### ThermoTrack—suitable for food grade, kosher and hot/cold chemical

ThermoTrack is a plug-in replacement for all 3.5 inch tanker thermometers. Powered by a solar panel and rechargeable battery, it is simple and quick to install as it does not require any wiring or custom installation. ThermoTrack contains a digital thermometer, GPS module, 4G modem, digital display and a backup battery which is recharged by the built-in solar panel. The digital thermometer connects to the inner tanker shell via a probe or cable. ThermoTrack is suitable for both hot and cold loads as it will monitor temperatures from -58°F to +257°F.

Real time location and temperature updates. Review and replay previous temperature and location.

ThermoTrack's tough construction ensures it can go through hot caustic washes again and again.

No wiring, no custom installation. ThermoTrack is a direct replacement for analog thermometers.

Set maintenance reminders by mileage or date.

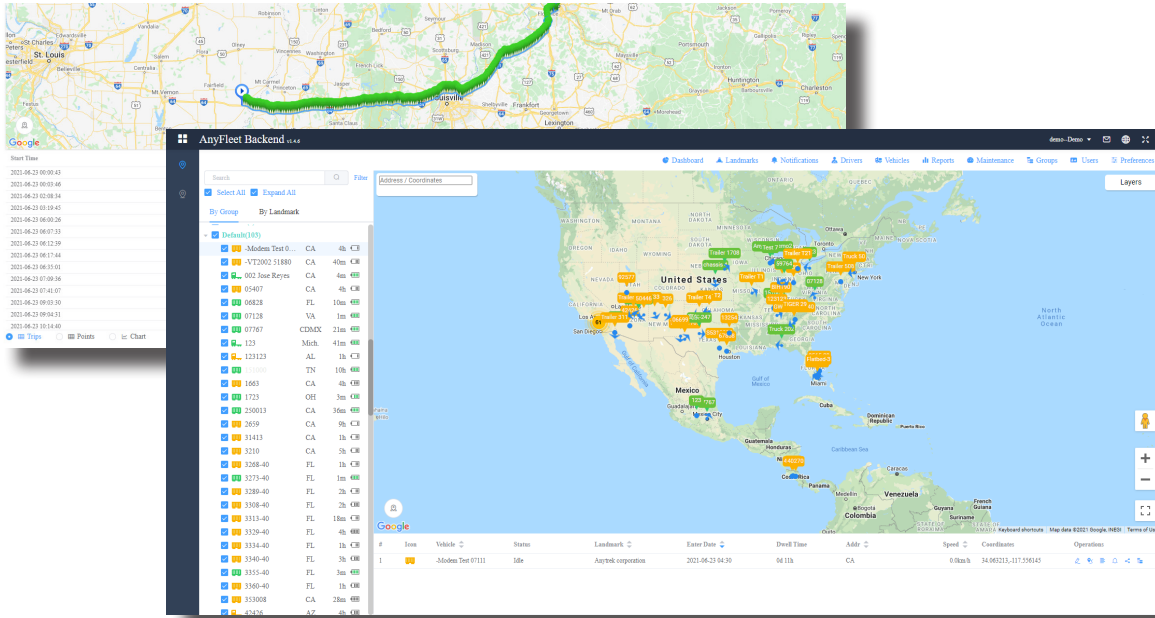

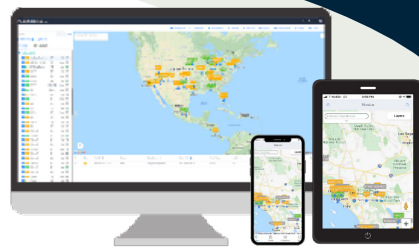

Gain advantage over your competitors. By offering your customers total transparency on the transport of their load.

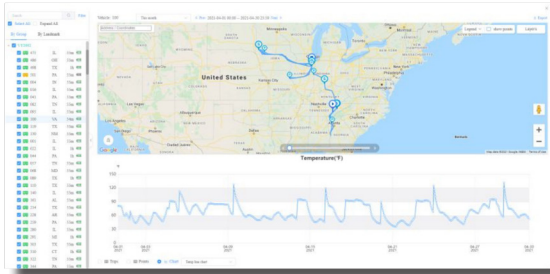

Informative alerts notify you of any important events.
