- 100mm x 60mm x 24.5mm

VT2109 is a tracking device, installed with strong magnetic and no external wiring required, it is widely used for asset management. The device supports 4G CATM+2G GPRS/GSM, universal communication, Beidou/GPS positioning [supports AGPS function], reports location data through wireless communication.

Main Functions

- 4G CATM+2G GPRS/GSM, universal
- Optional dual-feed point satellite antenna, supporting sub-meter high-precision positioning
- Built-in low-power MCU, supporting micro-amp standby current
- Multiple working modes can be switched flexibly, which can be applied to different occasions
- Standard 5000mAh high-capacity polymer battery
- Built-in photosensitive chip, support to remove the alarm
- Micro-USB charging port, 3 LED status indicators
- Ultra-low current consumption, less than 10uA in hibernation mode
- IP65 waterproof design
