Why Privacy Matters

- ▶ Every click, post, or search leaves a digital trace.
- ▶ Those traces build a picture of who you are
 - ▶ Habits
 - ▶ Interests
 - ▶ Locale
 - ▶ Relationships
 - ▶ Even moods
- ▶ Once something is shared, it can spread or stay online for years.

What You Reveal Without Realising

- ▶ Check-ins show where you go
 - ▶ Comments show what you care about
 - ▶ Photos show who you're with
 - ▶ Usernames connect your accounts
 - ▶ Birthdays hint at passwords
-
- ▶ Try looking at your social media on WayBackMachine:
 - ▶ https://web.archive.org/web/*/https://twitter.com/YourHandle

Oversharing Examples

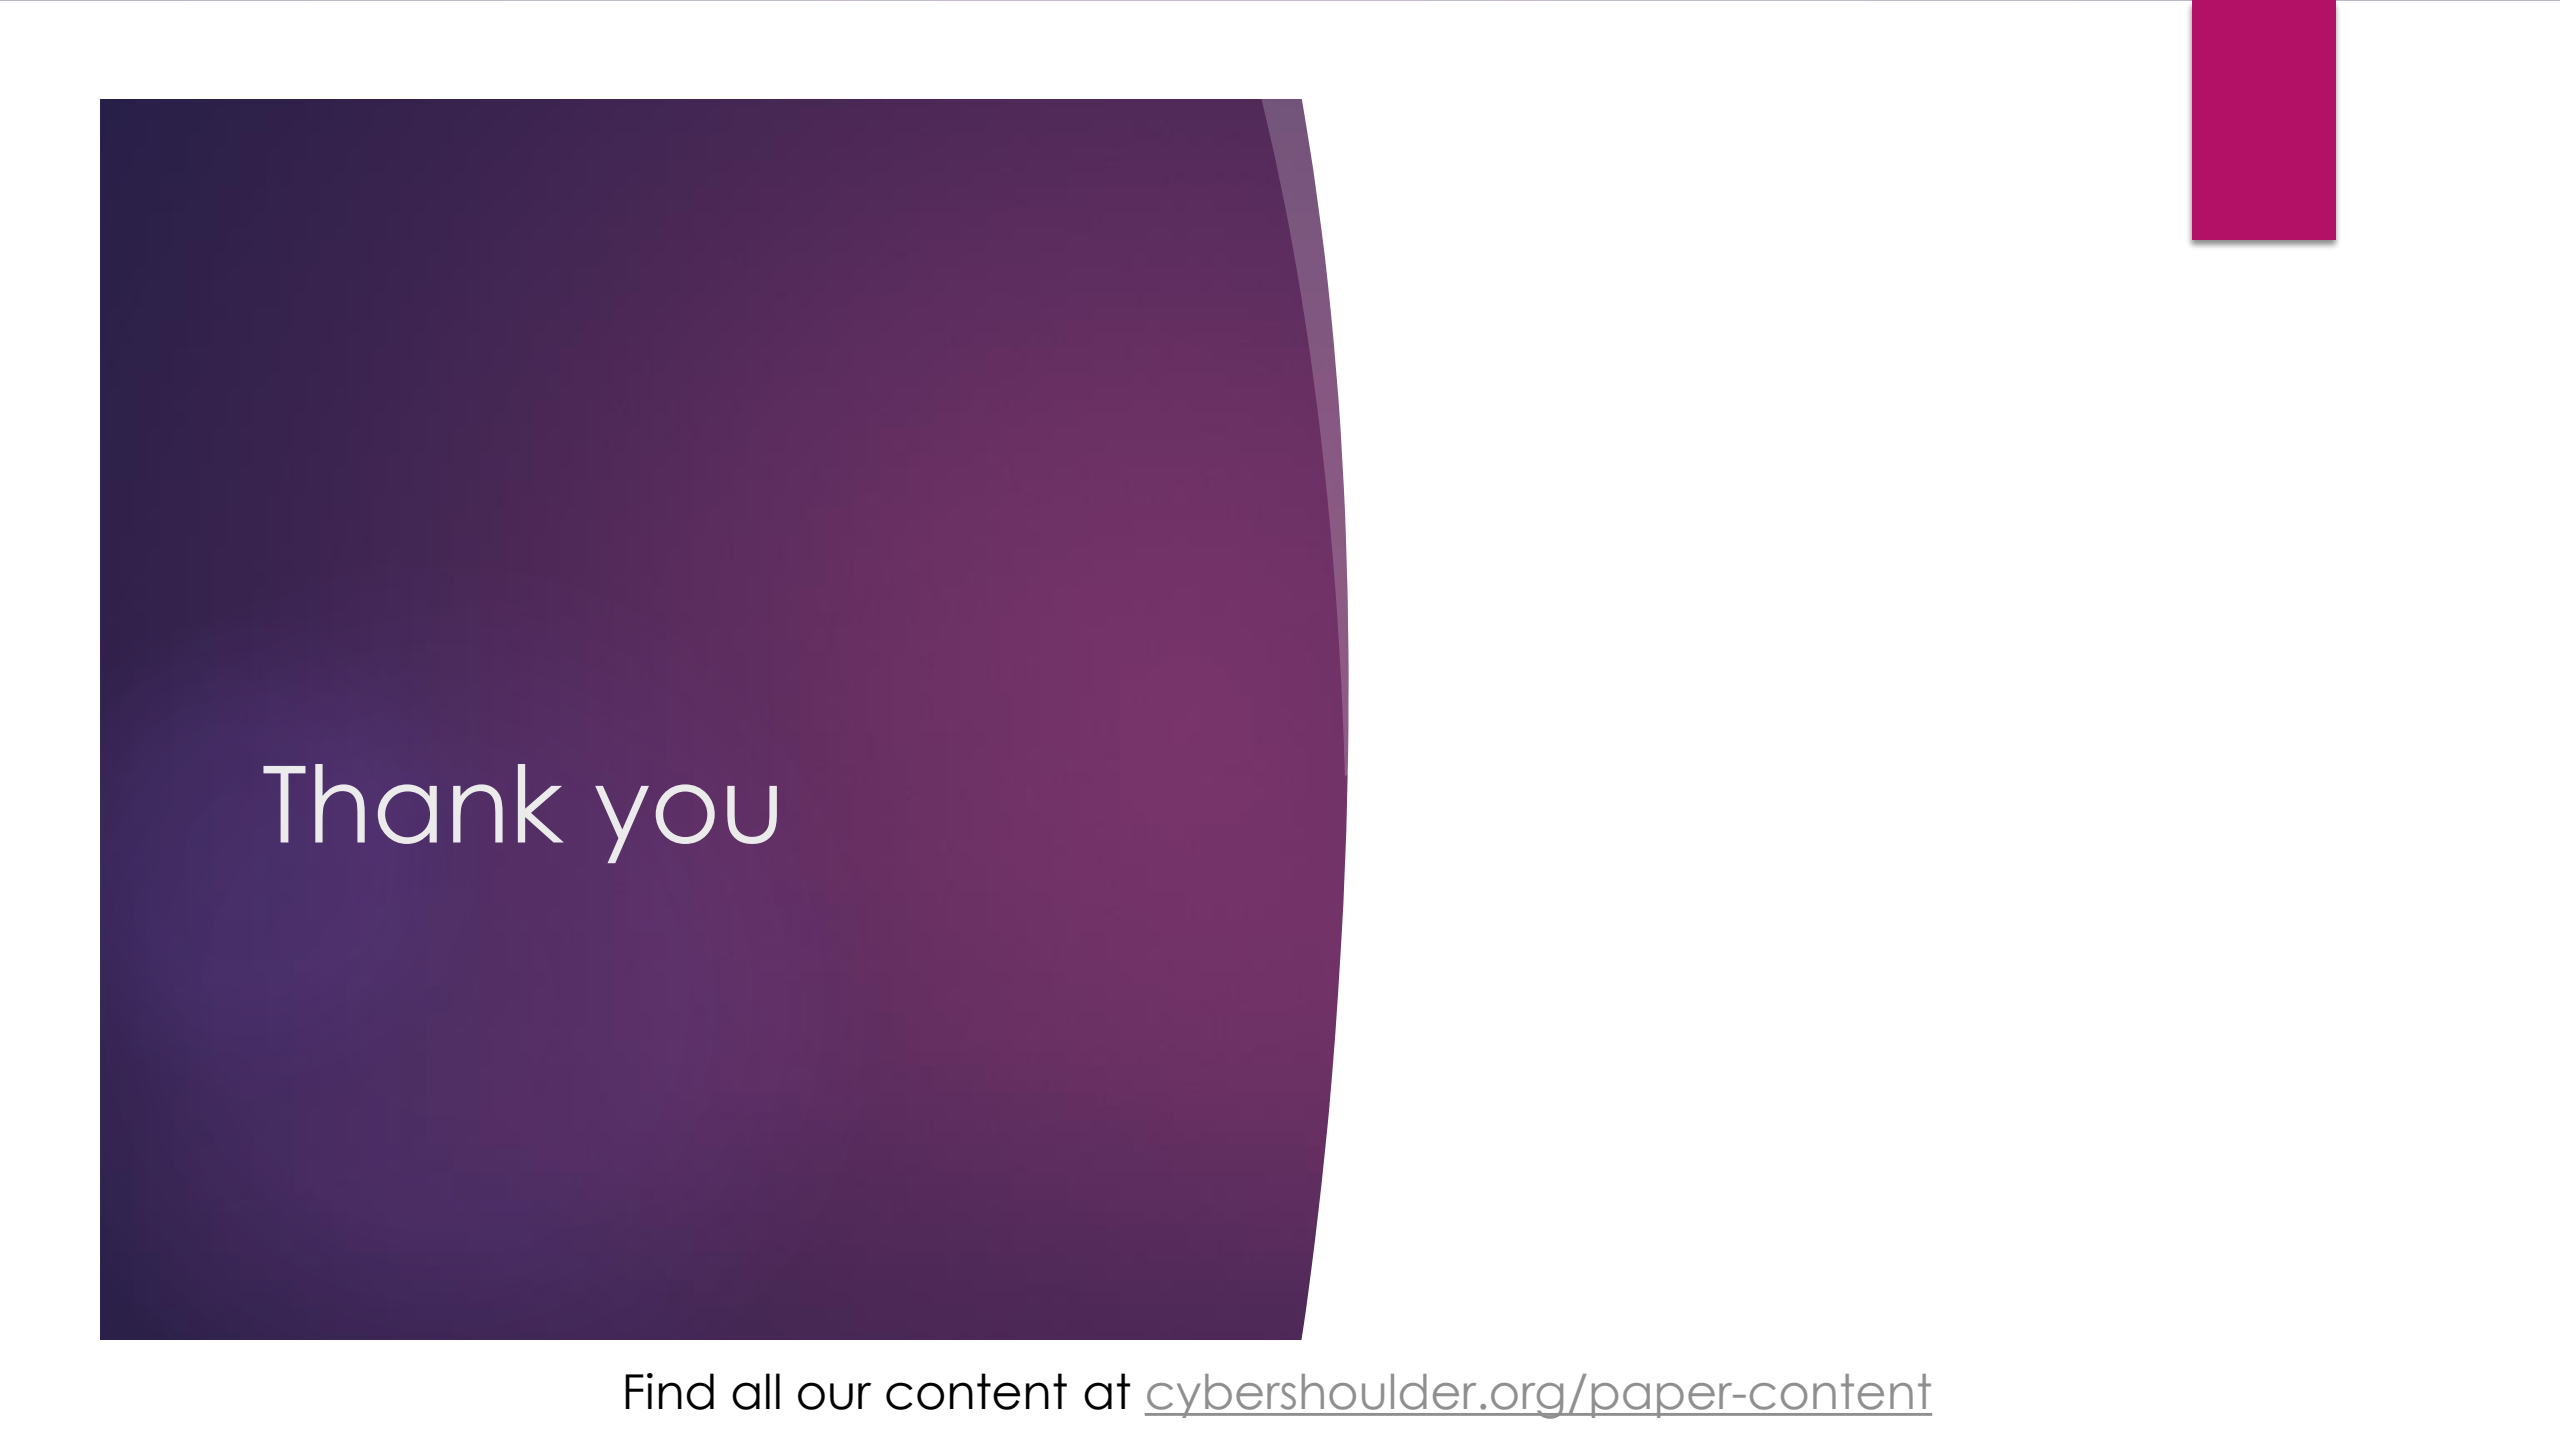

- ▶ Posting your holiday while you're away
- ▶ Sharing photos with your house or car visible
- ▶ Celebrating with your birthday or age in captions
- ▶ Tagging friends' kids or workplaces without asking
- ▶ Sharing screenshots that include private info

Privacy Settings Tips

- ▶ Review who can see your posts — “Friends” beats “Public.”
- ▶ Turn off location tagging when you don’t need it.
- ▶ Limit what apps can access your photos and contacts.
- ▶ Check what’s visible on your profile to non-friends.
- ▶ Audit old posts — hide or delete what you no longer want public.

Takeaway Slide

- ▶ Privacy = control, not invisibility.
- ▶ Think before you share — small choices add up.
- ▶ Review your settings regularly.
- ▶ Stay curious — the internet changes fast.

Thank you
