## CRATER LAKE OREGON

In southeastern Oregon, one of the most beautiful natural wonders of the world began to form 7700 years ago when Mt Mazama suddenly began to smoke igniting into fires. Deep snow melted in lightning flashes. Exploding, bits of trees flew alongside rocks of every hue and shape on sulfurous steam blasts. Burning hot gale force winds hurled the peak's boulders, thrashed shards and stinging grit high into the air, down the mountainside and around more than a 100 sq. mile radius.

Eventually at peace, Mt Mazama's rains and snow melts slowly filled the enormous cavern with some of the most pristine, pure waters ever to be found on the Earth. This is how the deepest lake (at 1943 feet) in the US was formed. Crater Lake is also the seventh deepest lake in the world. Its 30 mile Rim Drive encompasses the crater towering up to 2000' over the lake's edge.

Every step along the snow-patched rim path offers spectacular views of the true blue lake and its precious wildlife. The mystery of its two peaks emerging from its surface, Wizard Island, the cinder cone, and Phantom Ship, the andesite spire rocks in Crater Lake have enticed millions of admirers for generations.
