## GRAND CANYON NATIONAL PARK

The Grand Canyon National Park became a US National Park in 1919 by signed order of President Woodrow Wilson. It is believed that the Colorado River carved out this Wonder of the World 5-6,000,000 years ago. Covering a length of 277 miles and ranging from 4 to 18 miles wide, it also descends to depths of a mile. The Grand Canyon embraces 1,217,262 acres within the state of Arizona and was designated a World Heritage Site by UNESCO in 1979.

The primary areas for public use are in the North and South Rims, and their contiguous places along the canyon. Prized for its colorful layers of exposed rock, dating from the Precambrian times, 6,000,000 visitors arrive here each year. Nearly 2 billion years of Earth's geological story have been made visible as the Colorado River and its tributaries cut through layers of rock while the Colorado Plateau was uplifted.

Some believe the Havasupai People and perhaps other tribes native to this land may be able to genetically trace their origins back to the first people who appeared in North America some 20,000 years ago.
