

What Do You Do When Your Cabin Receives a Suitcase Full of Un-invited Guests?

Nattaro Bed Bug Solution

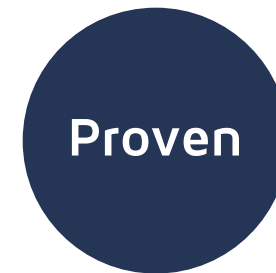

Prevent a bed bug infestation effectively with Nattaro Safe

Nattaro Safe™ is a special folded paper construction with a self-adhesive back supplied on a roll of tape

- Immediate effect, lasts for at least 12 months
- Kills bed bugs in all life cycle stages
- Possible to place where 90% of infestations begin – in beds
- Inside of paper covered with a thin layer of diatomaceous earth
 - Diatomaceous earth is a natural agent that absorbs the bed bug's protective wax layer, which results in the pest drying out and dying
 - Natural product made from fossilized silica algae
 - Safe for people and pets

Nattaro Safe™ design construction creates an environment that is attractive to bed bugs

- Dark and confined paper tunnel with inviting crevices
- The product is easy to apply
- Bed bugs cannot develop a resistance to the active substance

The Nattaro Safe product is made in Sweden & approved for use as a biocide.

Nattaro Bed Bug Solution

Nattaro Scout working with the bed bugs biology, not against it

Nattaro Scout™ is a bed bug monitoring system with pheromone lure

- The unique lure consists of synthetic pheromones and mimics a normal sized bed bug harborage (aggregation)
- Important to discover an infestation early, since the growth rate is exponential
- Research shows that nine out of ten bed bug infestations start in our beds
- Easy to fit on the floor, under the bed frame or inside the bed between the mattresses
- The Nattaro Scout device captures all stages of bed bugs
 - Bed bugs can climb in but not out
- The hit rate is 90% or more during the first six days
- Patent Pending

Capture rate (%) with and without lure over time (0-144h)
