FOR IMMEDIATE RELEASE

Girls Save The World™ Names Base44 Technology and Innovation Hub Partner for Global Youth Summit

Partnership begins now through Campus of Purpose-OS™, connecting purpose to practice as students build digital tools to accompany their prototype designs.

DALLAS, Texas — October 11, 2026 — Girls Save The World™ announces **Base44** as its Technology Partner and Innovation Hub Partner for the Global Youth Summit taking place April 22–24, 2027 in North Texas.

The partnership is already underway through Campus of Purpose-OS™, the digital heartbeat of Girls Save The World, where students connect leadership, life-readiness and hands-on innovation to real-world challenges.

At the center of the collaboration is a shared commitment: **Purpose to Practice**. Students discover a problem worth solving, consider who their solution will serve and begin building something they can test, improve and share.

Students participating in the current **Leadership in Motion: Route 66** series are already building technology to accompany their physical prototype designs. Through Base44, they are developing the digital side of their ideas alongside the design process, connecting what they imagine with how a solution could work for the people who need it.

“Purpose becomes powerful when students have an opportunity to put it into practice,” said Chonnie Richey, Founder and CEO of Girls Save The World. “We ask them to start with two questions: Who are we helping, and what do they need? Base44 helps them take the next step, building the technology that can bring their ideas to life. When young people can design, test and explain a solution, they begin to see themselves as people who can shape what comes next.”

Base44’s AI-powered app-building platform enables users to create applications through natural-language prompts. Within the Girls Save The World ecosystem, this approach introduces students to “vibe coding with purpose”: using clear instructions to build digital tools, then examining whether those tools are useful, accessible and responsive to a real need.

Campus of Purpose-OS connects that building experience with the broader student journey, bringing leadership programs, the Life, Series™, MentHERship™ and student projects into a shared digital home. The partnership creates continuity between learning throughout the year and the work students bring to the Global Youth Summit.

“Young people already have ideas about how to make their schools and communities better. What changes when we put the ability to build in their hands? They can move beyond imagining solutions to creating, testing, and improving them. That's what excites

us about partnering with Girls Save the World: we're not just introducing students to AI, we're empowering them to use it to build something meaningful."

— **Dr. Melanie Lo, Director of Educational Innovation, Base44**

At the summit, the planned **Base44 Builder Lab | Build What Matters** will serve as a dedicated Innovation Purpose Hub, connecting with AI for Good™ and supporting digital development across the Campus of Purpose. Students exploring challenges in food, water, energy, housing and other fields will have a space to translate their ideas into digital tools that complement their prototypes.

The Builder Lab will bring the partnership's purpose-to-practice approach into a hands-on setting where students can build, test, refine and demonstrate their work. The summit will connect those experiences with leadership, mentorship and opportunities for young people to explain both what they created and why it matters.

The collaboration reflects how Girls Save The World brings its ecosystem to life: connecting a partner's expertise to a student's opportunity to act. Technology becomes a tool for solving a problem. Industry knowledge gives a challenge real-world context. Student work makes the learning visible. Together, those connections help young people move from passion to purpose to impact.

Building for good. Building what's next. Building a future for everyone.

About Girls Save The World™
Girls Save The World helps middle and high school students turn passion into purpose and purpose into impact through leadership development, life-readiness, MentHERship and hands-on innovation. Its Campus of Purpose ecosystem connects year-round learning with real-world challenges and opportunities to build, collaborate and lead. Learn more at www.girlssavetheworld.org

About Base44
Base44 is an AI-powered app-building platform that enables people to create applications using natural language. Users describe what they want to build and refine their applications through conversation. Learn more at www.base44.com
