

# Video Streaming – Mobile App and Web Portal

---

JP

# Project overview

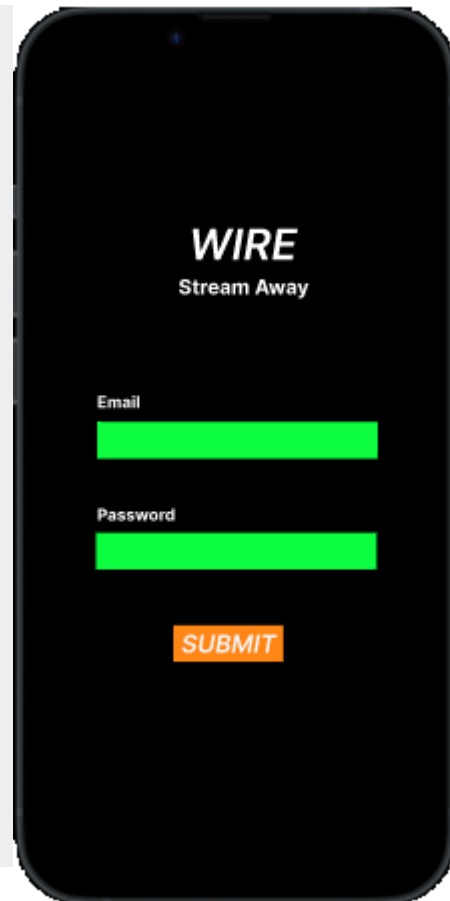

## The product:

The video streaming platform is aimed at creating and sharing content from both channel partners and socially conscious content creators for social good.

## Project duration:

June 2022 – February 2022 (9 months)

# Project overview

## The problem:

The project is to solve for building a unified streaming platform that engages users with great entertaining and socially conscious content from content creators.

## The goal:

A better video streaming and content consuming experience thereby promoting social good.

# Project overview

## My role:

UX Designer

UX Researcher

## Responsibilities:

User Research

Wireframing

Prototyping

Responsive Design Development

Design Hand-off

# Understanding the user

- User research
- Personas
- Problem statements
- User journey maps

# User research: summary

The user research conducted was aimed at understanding preferences of users looking to sign-up for a streaming service, the type of content preferred, and level of engagement while viewing content.

# User research: pain points

1

## Long sign-up process

The sign-up process for both video streaming content viewers and content creators is long and tedious.

2

## Complex Interface

The video streaming platform interfaces supporting high definition content are often heavy and hold complex design patterns.

3

## Only official channel content

For the sake of regulation, platforms do not allow or promote user generated content, content generated by local users for the local community enable social good through the medium.

# Persona: Sara

## Problem statement:

Sara is a young teacher, who along with her profession, looks to reach, engage and educate her community on subjects of importance.

**Sara**

**Age:** 29

**Education:** BS –Sociology

**Hometown:** Atlanta, GA

**Family:** Parents and brother

**Occupation:** Teacher

*“Delivering positive ideas and content that help create a better tomorrow”*

## Goals

- To impart wisdom to others that help enable better awareness with better reach

## Frustrations

- Traditional print mediums have low reach
- Doesn't cater to every segment of audience

Sara is a school teacher who constantly looks to learn new things and share with the children at school at the community at large for a brighter future of her neighborhood. Her common hurdles are a lack of reach and lack of people's interest in subjects of importance.

# User journey map

ACTION	Visiting Platform	Signing up for service	Creating Content	Viewing Content	Analyzing Metrics
TASK LIST	Tasks  A. Visit the streaming platform  B. Understand services	Tasks  A. Provide the details  B. Sign-up as a creator or a viewer	Tasks  A. Generate content  B. Edit and finalize  C. Upload and share video	Tasks  A. Browse through the video catalog  B. Search for the video title  C. Stream the video	Tasks  A. Analyze viewership details  B. Iterate on better content
FEELING ADJECTIVE	Eager	Tired	Exhausted	Relieved	Insightful
IMPROVEMENT OPPORTUNITIES	Easy to view key details	Reducing number of fields in the process	More features to edit content comprehensively	Better design elements to store and replay from where left	More metrics to understand users deeper

# Paper wireframes

Five different paper wireframe sketches were drawn to get a view of how the streaming platform would display the different videos in the catalog.

# Digital wireframes

The digital wireframe of the mobile app provides an outlook of the key features on the video streaming platform for the viewer.

The search bar at the top of the platform helps the user lookup the videos by titles or channel names.

The video title and channel description are used to help users differentiate between official channel content and user generated content.

# Digital wireframes

The digital wireframe of the stream screen aims to provide an outlook of the comments section and similar videos section that go in parallel below the main video.

The comments section below the video stream helps users share their views on the content and connect with fellow viewers.

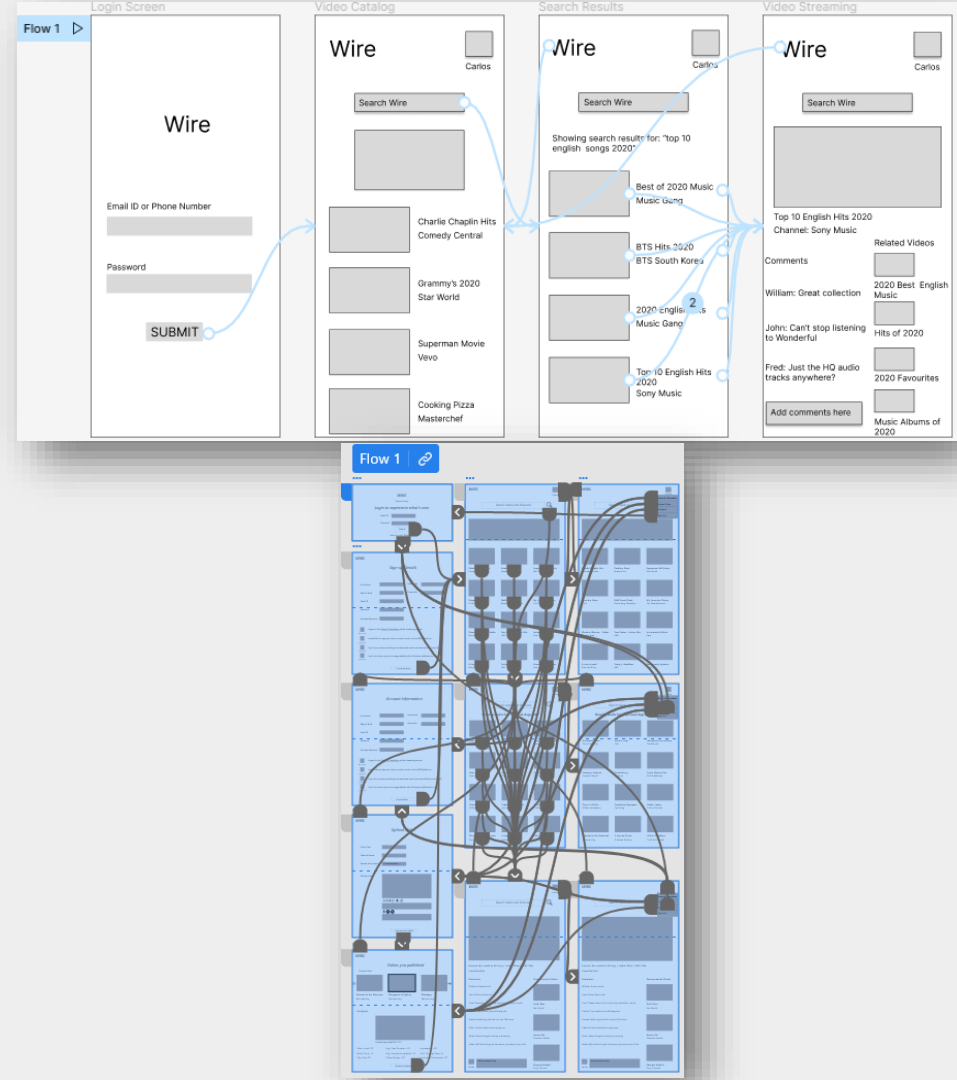

The “Similar videos” section provides an opportunity for the user to scroll through content while the chosen video is still playing on the page.

# Low-fidelity prototype

Low Fidelity Figma Prototype –  
Mobile App

Low Fidelity Adobe XD Prototype –  
Responsive Web App

# Usability study: findings

The user interviews conducted based on needs of consumers looking for a simple to use video streaming platform for content creation and viewership.

## Round 1 findings

- 1 Simple sign-up process
- 2 Not very complex streaming interface

## Round 2 findings

- 1 Resource requirements for creators
- 2 Simple upload and analysis process

## Refining the design

- Mockups
- High-fidelity prototype
- Accessibility

# High-fidelity prototype

High Fidelity Prototype –  
Mobile App

High Fidelity Prototype –  
Responsive Web App

# Accessibility considerations

1

Throughout the design process high-contrast colors were used in correspondence with the background to aid better visibility

2

Plain text summary labels are included to the top of every screen for screen reader tools to call out the selections made

3

The shortest path to navigate the user flow has been designed to complete the content creation and content consumption process.

## Going forward

- Takeaways
- Next steps

# Takeaways

## Impact:

An engaging video streaming platform is the single biggest way to both entertain and educate audience with relevant content by designing for social good.

## What I learned:

The wireframes, mockups and prototypes of mobile app designed using Figma and responsive web app through Adobe XD summarize a good understanding of key features of both these great tools that offer simple to use techniques to bring ideas to life.

# Next steps

1

Hand-off the designs to the developers and assist the build.

2

Understand the user behaviour once the product is live and build a priority of new features.

3

Reflect on the design backlog and understand how the additional features would supplement the initial goal of the initiative.

Thank you!
