SWIFT WSC

Annual Water Quality Report for the period of  
January 1 to December 31, 2018

This report is intended to provide you with  
important information about your drinking  
water and the efforts made by the water system to  
provide safe drinking water.

For more information regarding this report contact:

Name Matthew Barrett

Phone 936-462-7843

***Este reporte incluye información importante  
sobre el agua para tomar. Para asistencia en  
español, favor de llamar al telefono  
(936) 462-7843.***

Swift WSC has an annual meeting each year for  
stockholders or anyone can request a meeting at  
any time.

## Info About Your Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pickup substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

The source of drinking water used by  
SWIFT WSC is Ground Water
