

# Powering ... Robot Automation, Tracking and Integration

## Problem statement

- Transport carts that move between facilities get lost
- Carts are placed at the wrong dock and get transported to the wrong location
- AGV's and AMR's don't know where to pick up carts that were dropped off at the dock

## Growth

- Currently 3 sites installed for pilot
- 2 Different Cart Tracking Projects in each location
- All internal KPI's show significant improvement resulting in additional sites planned
- Utilizing 3<sup>rd</sup> party RTLS with Internal System integration
