Gator Pump, Incorporated manufactures high volume centrifugal pumps in several configurations.

All Gator pumps operate submerged which eliminates priming and suction hose components.

We think you’ll find that Gator Pump’s products are the most efficient and easy-to-use pumps on the market.

We look forward to meeting your pumping needs.
Gator Trailer Pumps

Trailers operate via tractor PTO, diesel engine, or electric motor. Trailer pumps are available in various configurations and sizes to meet individual pumping needs.

Trailers are available in 4” to 24” discharge diameters. With flow rates up to 17,000 gallons per minute.

Gator PTO Trailer Pumps

PTO Pumps are designed with ease of operation in mind.

Operation consist of hitching the pump, connecting the PTO shaft and discharge hose and backing the pump into the source.

Gator Ditch rider

The Ditch rider trailer pump is designed for pumping situations that involve a steep bank or canal.

The angled shaft design allows for easy operation under such conditions.

Diesel Powered Pumps

These pumps are being powered by a diesel engine mounted on the pumping unit.

This design allows the pump and power supply to be totally self-contained.
Gator Vertical Pumps

Gator Pump vertical pumps are ideal for permanent installations. The pumps can be powered by electric motor or designed with a gearbox for other power sources.

Vertical Pumps are available in 2” to 16” diameter discharges with flow rates up to 17,000 gallons per minute. Gator Vertical Pumps can also be mounted on floatation devices if desirable.

Vertical Electric Pump

Gator vertical electric pumps offer a sensible answer when permanent pumping is a necessity.

Vertical electrics are ideal for dairy waste, and feed yard applications.

Vertical Gearbox Pump

Vertical gearbox pumps offer an alternative to electric motor power supply in a vertical design.

Gearbox pumps can be operated by diesel engine or other power source.

All of Gator Pump’s manufactured pumps and parts are hand crafted in our production facility.
Other Options for Gator Pumps

**Gator Power Units**
Gator Pump offers an alternative to PTO, and electric power with a diesel power unit like the one above. The unit includes a diesel engine with safety shutdowns, belt and sheave speed reduction and guard, tandem axle trailer with springs, fenders and lights, a ball coupler, pin hitch, pump connection, fuel tank, battery, jack and stabilizing legs. The unit is easily pulled by pickup to the pumping site.

**Pond Scavenger**
This floating model includes a diesel engine driven pump mounted on flotation with protective handrails. This pump is available in 4” to 16” discharge sizes. Floating models are also available with electric motor driven vertical pumps.

**Large Pumping Projects**
Five 24” diameter discharge trailer electric pumps transfer water from a river to a canal on the other side of a levee. The combined output is approximately 80,000 gallons per minute and provides irrigation water for numerous farms in the area.
