

NEW! “Bladeless” Single Vane Impeller

Since larger pumps tend to clog less frequently than smaller pumps, “bladeless” single vane impellers are *ideally suited* for pumps 2” to 5”, pumping at a lower capacity.

The “bladeless” single vane impeller can handle 10 to 25 times more solids when compared to the standard two-vane impeller.

“Bladeless” impellers are ideal for municipalities with sewage flows that are relatively low. **Best suited for unscreened raw sewage and sludge containing solids like:**

- Rags
- Silt
- Grit
- Other fibrous matter
