STEP 6: ADD DÉCOR

STEP 7: ADD WATER BOWL

STEP 8: MIST TANK WITH WATER FOR HUMIDITY (30%-40%)

ANY QUESTIONS?
GIRLMEETSPETS@GMAIL.COM

Leopard Gecko Diet

Leopard Geckos are insectivores meaning their diet only consists of insects. Leopard Geckos eat many different types of insects, but their favorites are Dubia roaches, Crickets, and mealworms. They also enjoy super worms and wax worms as treats. Keeping live insects for feeding is easy but you need a secure container. You will also need a water source for the live insects. Feed your Geckos 2-4 times per week.

Live insects + Water = Happy Gecko!

Cleaning

You should clean your Leopard Gecko tank every 2 weeks. You should spot clean every time your Leopard Gecko goes to the bathroom.
