

SAFETY ALERT

On, April 29th an associate experienced a bee sting while on a project's right-of-way. As associates are outside their vehicles, they should make themselves aware of the possibility of insects and other environmental hazards (i.e. bees, snakes, poison ivy, etc.).

During the investigation process, we discovered that associates need Sting Relief wipes to keep with their first aid kits. Sting Relief provides temporary relief from pain and itching caused by insect stings and bites.
