EMERGENCY RESPONSE

There are important emergency response resources that Validus Energy makes readily available to all workers for use in responding to an emergency event. These resources can be found by going to www.validus.energy and selecting the "**Emergencies**" tab from the dropdown menu. Within these resources you will be able to locate all the information you need to respond to an emergency. By far, the most useful initial response tools available at this site are the Emergency Response Flyer and the Emergency Response Guide. Having knowledge of these emergency response resources and understanding response objectives will help you perform with a high level of efficiency if a real emergency occurs.

RESOURCES

The following Emergency Response resources are made available at www.validus.energy:
- Emergency Response Plan (ERP)
- Emergency Response Guide (ERG)
- Emergency Response Flyer
- Emergency Action Plan (EAP)
- Facility Emergencies
- Directions

You should become familiar with the information contained within each of these resources, and remember that these resources are being updated constantly, so obtain these documents directly from validus.energy.

EMERGENCY RESPONSE GUIDE (ERG)

FIRST RESPONDER	EMERGENCY COMMUNICATION
The first worker to recognize the emergency is the First Responder (FR) (see ERG pg. 8). The First Responder is responsible for maintaining the safety of themselves and those nearby, initiating emergency response actions, and implementing the Incident Response Plan (ERG pg. 38-47). The FR is also the initial Incident Commander (IC) until the role is assumed by a higher authority.	The **Emergency Contact Number** that you generally see at all our facility and wellsite entrance signs is made available for the public to report observed emergencies. The **Crew App** is made available to connect our entire workforce on a private emergency communication channel that connect all levels of the company from the field to the corporate leadership team. The Crew App is our designated Emergency Communication platform.

(ERG) INCIDENT POSITION ASSIGNMENTS

The Incident Commander (IC) and/or the Emergency Manager (EM) will assign roles to workers as appropriate to respond to the emergency. These roles will also scale the response depending on the emergency level. It may not be necessary to assign all roles. . *Note: see the Emergency Response Guide for more information.*

Level I Emergency	Level II Emergency		Level III Emergency
INCIDENT COMMANDER		EMERGENCY MANAGER	
Operations Chief	Safety Officer	HSE	
First Responder	Public Information Officer	Security	
	Liaison Officer	Internal Stakeholders	
Staging Leader	Planning Chief	Logistics Chief	Strategic Planning
			Finance/Admin

FACILITY EMERGENCIES	EMERGENCY RESPONSE FLYER	EMERGENCY ACTION PLAN
The Facility Emergencies link provides the following resources: • Detailed map with all critical residents, environmental, travel, and other important infrastructure. • H2S ROE map where appropriate. • Facility drawings. • Site Specific Safety Plan. • Turn-by-turn directions.	The Emergency Response Flyer provides the following information: • Tactical response procedures • Safety contact information • Emergency services information • Emergency contractor contacts • Response objectives	The Emergency Action Plan (EAP) details provides a great deal of information on how to respond to an incident regardless of whether the emergency occurs in the field or the Denver or Houston office. In the plan you will find: Initial response instructions Evacuation plans Primary contact numbers Emergency services How to report an incident

To be Aware is to be Prepared
