

Rifle League Scores for 2019

I've assembled all the recorded scores, I was able to locate, for 2019. Given that I didn't have a really good way to list all the scores, there may be some missing scores. I don't believe there are any errors in the scoring, but there are date listing errors. We have a system for 2020. It will be hugely accurate.

This was a not a truly competitive League. Given the differences of the rifles, it would be grossly unfair having a heavy barrel bolt action rifle, competing against a top break survival rifle. It was surprising to see what could be done with rifles not believed to be very accurate. Ken Budlong shot a 150-6x with a standard barrel Ruger 10-22, using SK Target Ammunition. All the rimfire shooters were impressed with how awful some rimfire ammo could be. We also learned, that just because it says "Target" on the box, doesn't mean it's going to perform at the target level. Higher Grade Eley seemed to be best of the Rimfire Target Ammo. Standard Velocity outperformed High Speed overall, but some of the CCI High Speed was surprisingly accurate.

John Hartman, was the only .22 Rimfire Shooter to produce a perfect score of 150-15x. He put all 15 scoring rounds into a single, curved hole, in the X Ring. He used the top grade Eley Target Ammo, fired from a Remington 40x Target Rifle. Impressive.

Jason Taylor shot some 150's with his AR15 build in .223., firing a 150-13x on 9/16. That's good shooting with a gas gun.

Chris Budlong's CZ455 was proven to be very accurate, along with all the Ruger Precision Rimfires.

Ammunition was key with all the Rimfire Rifles, along with wind conditions.

Ryan, and Paul, came up with rifles that couldn't be considered Target Grade, but they're both good shots, and they were both better than the rifles they used.

Ken Budlong turned in a 144, and 147, with a Henry .41 Magnum Carbine.

That's good shooting.

Mike Browne, and Tom Browne, cheated with their heavy barrel F Class guns, with 150-15s. The Centerfire Target Rifles will clean the SR-1 Face consistently. It's really overkill for 100 yard shooting, but useful for load testing.

Looking forward to next year.
