UCID™

ucidentifier.io

The Universal Communication Identifier (UCID™) is an immutable, verifiable record of every network device

Software Licensing

Geotracking

Supply Chain Management

WHAT IS UCID™?

UCID™ provides cross-network security for any device connected to any network. By nesting the device's unique identification number on the blockchain, we help cybersecurity teams catch device anomalies before they become serious network breaches.

Recent Case Studies

DRIVING DIGITAL TRANSFORMATION AT THE U.S CENSUS BUREAU

PROBLEM
While on the road, census field enumerators face serious injury and property damage risks. Legacy systems add complexity to the claims process, elongating resolution times for workers.

SOLUTION
The Electronic Medical Mobile Application (EMMA) integrated UCID™ to reduce the claims filing process by 95%, provide real-time updates, and deliver expeditious care to workers.

IMPROVING THE CLAIMS PROCESS FOR VETERANS

PROBLEM
When supporting veterans with mass torts and personal injury claims, legal teams face data security and centralization challenges that, in many cases, leave millions without the care they desperately need.

SOLUTION
NssX integrated UCID™ into its claims platform to secure veteran patient information while maintaining data integrity and provenance of all associated devices to reduce resolution times by 90%.

ROBOCALL AND SMISHING DEFENSE FOR MOBILE USERS

PROBLEM
Billions of scam robocalls are made yearly with no definitive solution to stop them. As a result of smishing, phishing, and vishing attacks in recent years, billions of dollars have been lost across millions of users.

SOLUTION
Gabriel™ Crypto leverages crowdsourced data to stop unwanted calls on all devices and network providers. UCID™ helps users restore all of their app data in the event their device is lost, upgraded, or replaced.
