

**NO MORE  
LOST KEYS**

## Nimbus RFID Digital Combination Lock

The flexibility of our existing Nimbus digital keypad lock is now expanded to RFID contactless usage as well.

Right down to the printed circuit board, Lowe & Fletcher manufactures these locks in our own facility to exacting standards, including the use of encrypted RFID protocols.

The Nimbus range of locks are all designed to fit the same footprint as our standard electronic lock range, making them easy to upgrade or retro-fit to existing installations.

Available in wet area version, public, private and RAS remote allocation modes, typical applications for the lock include commercial and office environments, lockers and enclosures.
