

COMPANY PROFILE

Empowering Your Business with Quality
Fashion, Textiles, and Accessories

About us

MCSBASE is a global production hub that provides competitive quality and pricing for yarn spinning, knitted fabric, and woven fabric to global buyers and customers through outsourcing in Vietnam, China, South Korea, and Indonesia.

MCSBASE aims to address the market challenges by creating a global production hub that offers a variety of items, competitive quality, and pricing to global buyers and suppliers.

Vision

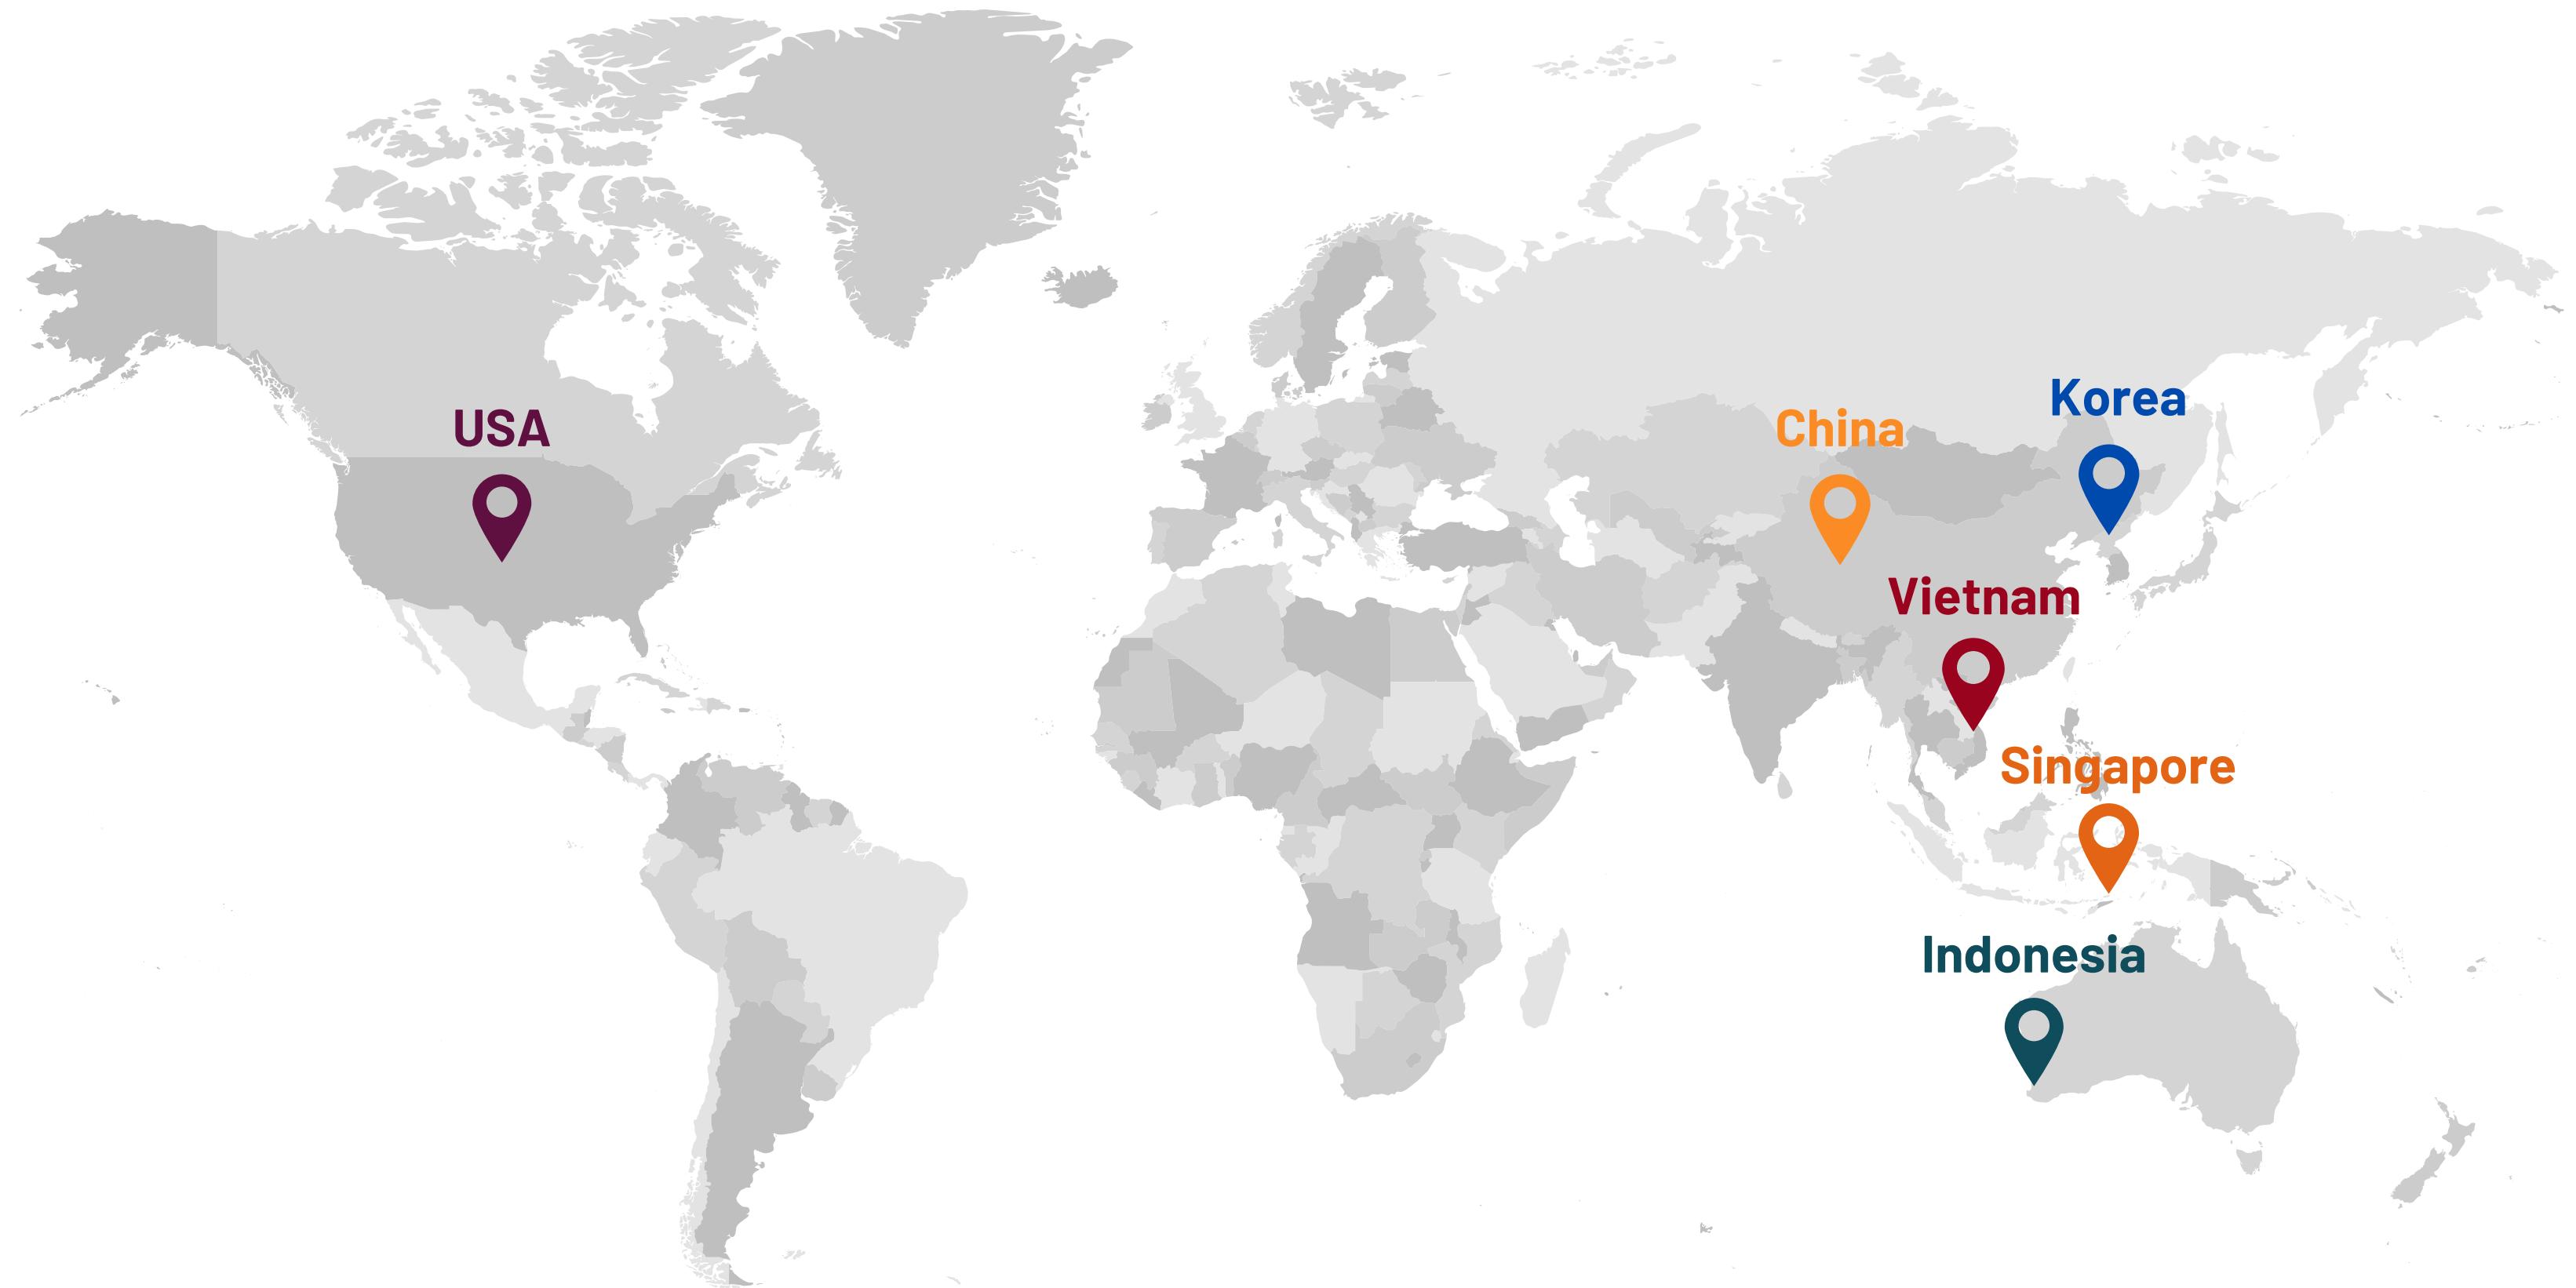

Empowering your business with quality fashion, textiles, and accessories from Global Production Hubs.

Mission

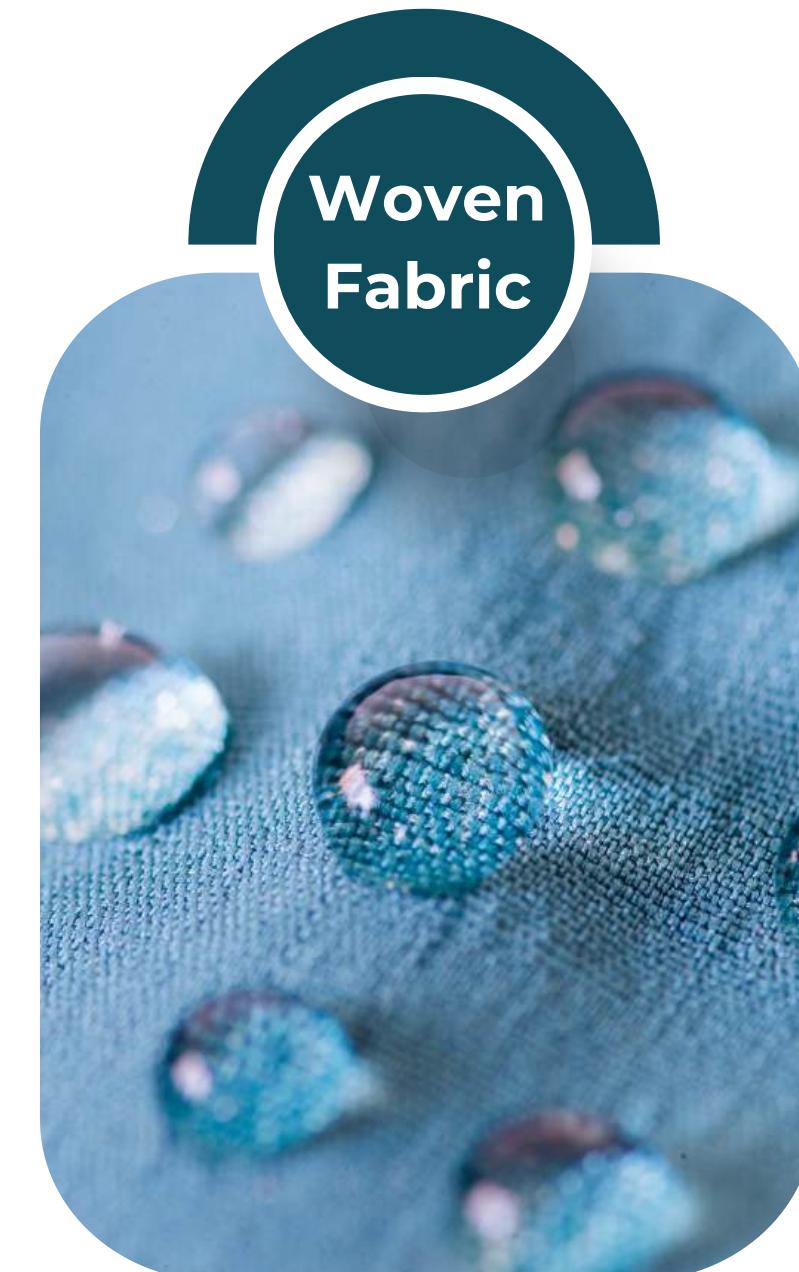

We aim to satisfy buyers with both quality and price while targeting the international market.

Business Distribution

Our product

We offer a wide range of fabrics thought direct production and outsourcing

Cotton fabric

Our core strength lies in sourcing and supplying various types of cotton fabrics, including **100% cotton, combed cotton and high version:** Supima cotton, Pima cotton, Organic cotton, and more.

Cotton blend

A balanced fusion of natural comfort and technical performance.

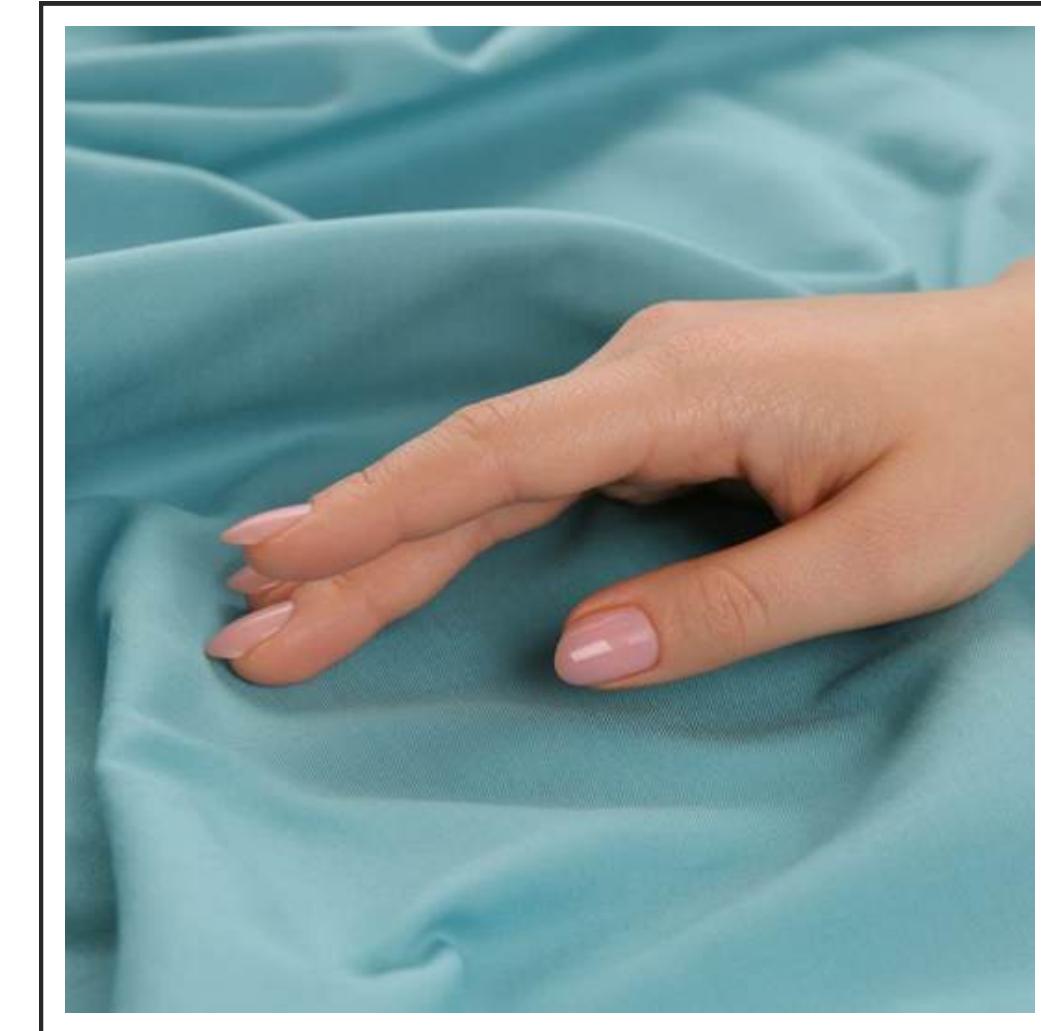

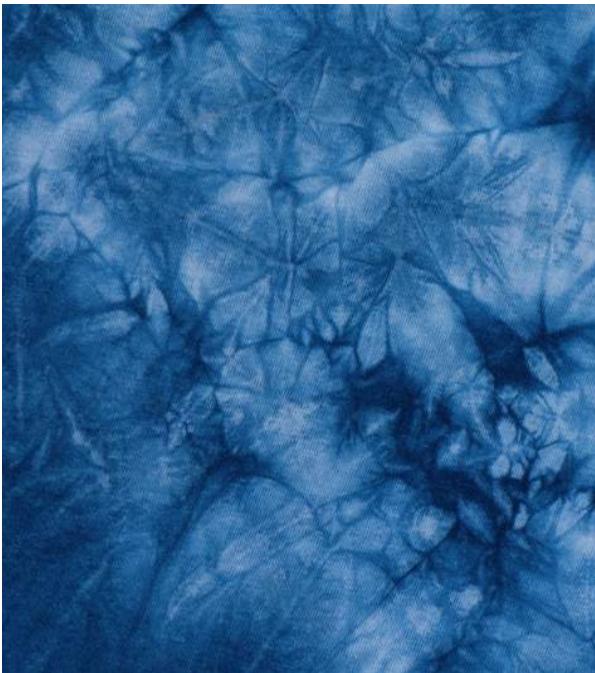

Enhanced strength and flexibility make it ideal for modern, multi-purpose apparel.

Synthetic fabric

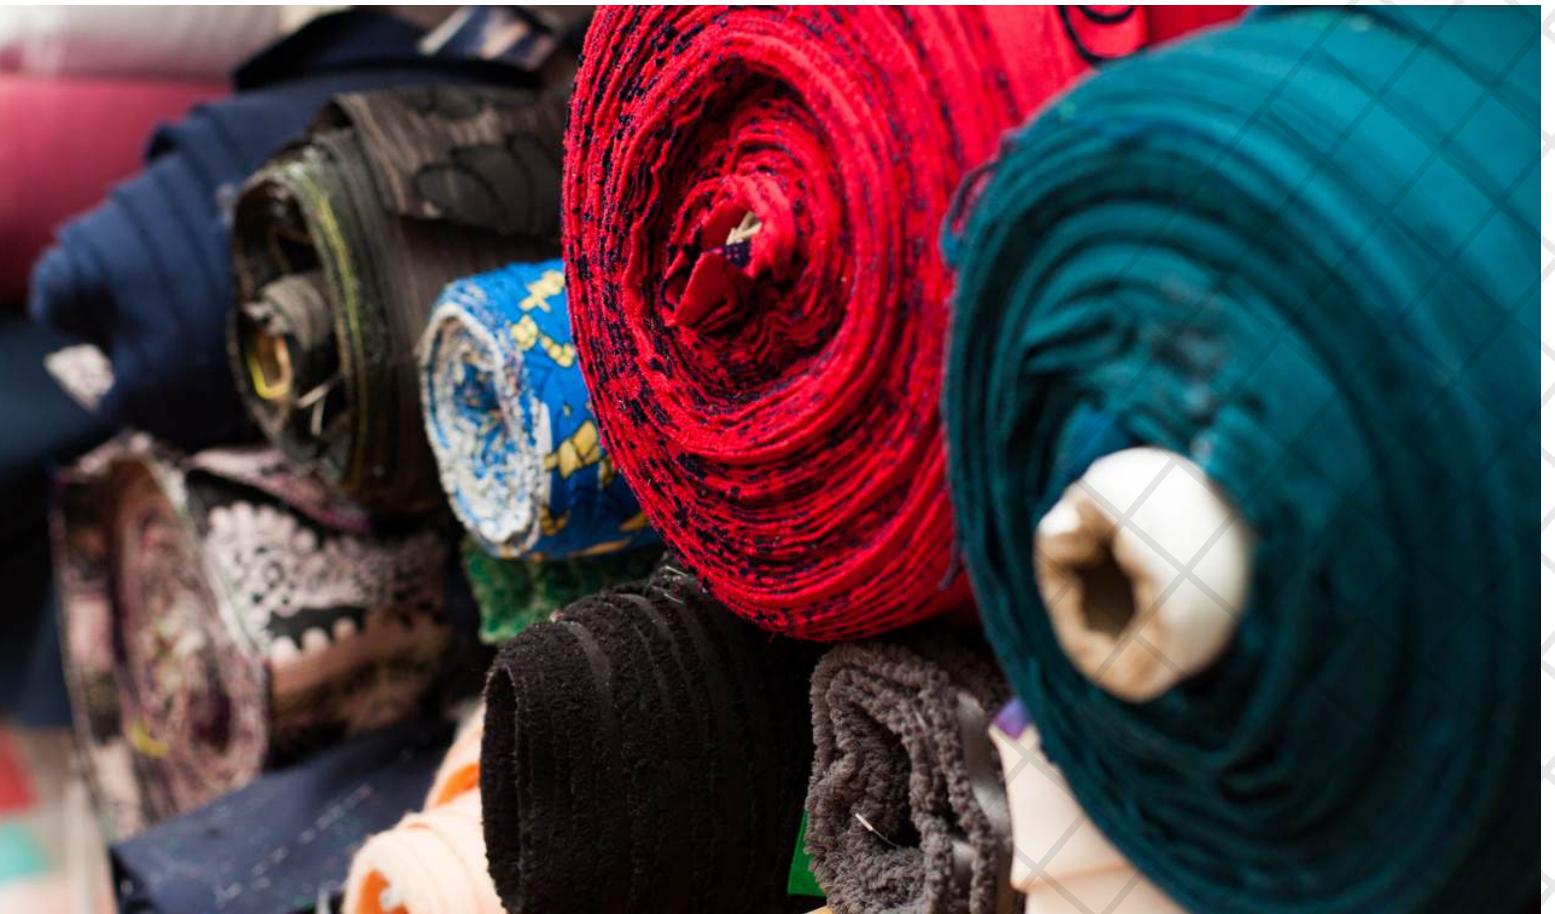

Premium synthetic solutions developed for durability, stretch, and technical performance.

Polyester / Nylon / Spandex / Elastane / Acrylic / Rayon / PVC / Modal

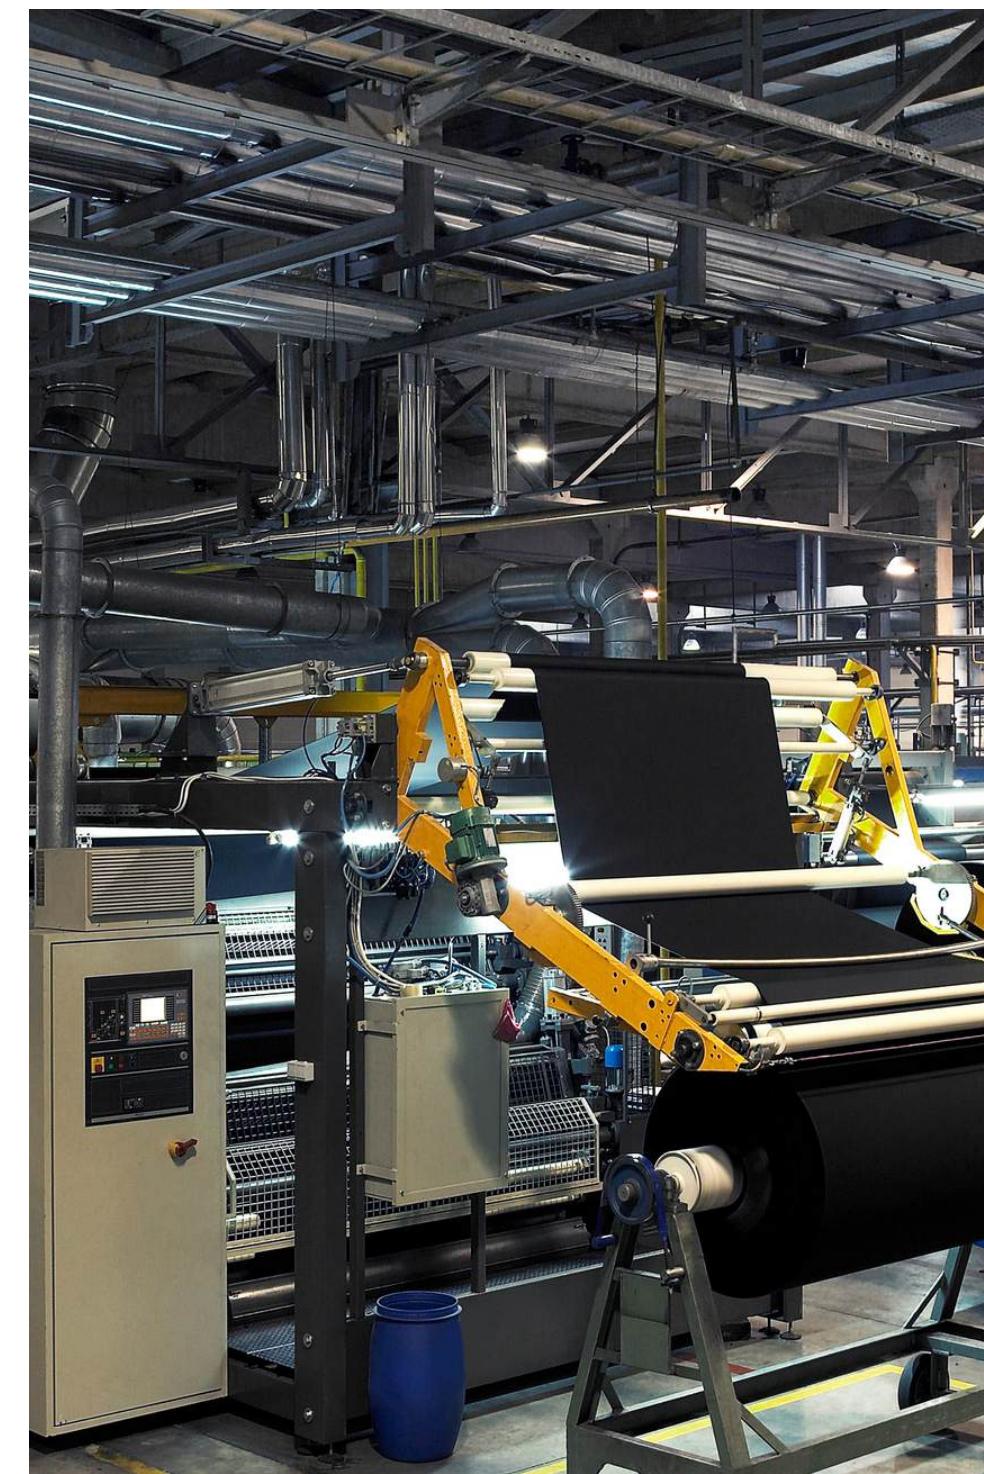

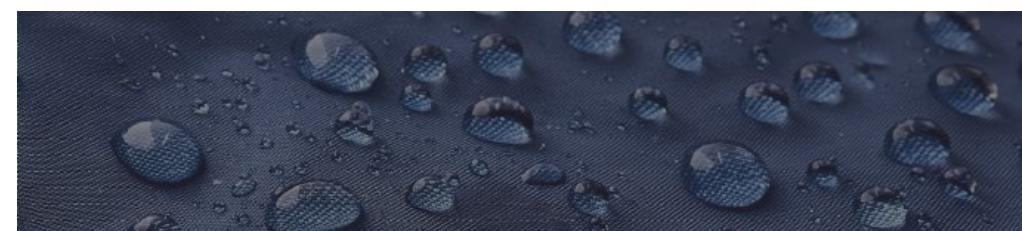

Knitted Capability

- Our supply chain is based in Vietnam. For selected specialty items, we follow customer requirements, including designated suppliers and specified sourcing origins.
- Capability ~ 1,500 – 2,000 tons / month.
- Our strength: products made from cellulose: cotton, cotton blend, recycled fibers.

Woven Capability

- We can supply a variety of woven fabrics through our operations in China and Vietnam: plain, twill, etc, ...

CLOSED-LOOP KNIT FABRIC PROGRAM

Fabric Supply & Pre-Consumer Waste Take-Back

WHAT WE DO?

Closing the Loop at Source

We supply knit fabrics and take responsibility for the pre-consumer waste generated from those fabrics during garment production.

A Practical Program for Garment Factories

This program is designed for garment factories that need a clear, practical answer to buyer requirements on waste handling, circularity, and ESG — without disrupting production flow

PROGRAM SCOPE

Fabric types

- Single jersey
- Pique
- Fleece
- Interlock

Fibers types

- Cotton
- CVC
- Cotton-Spandex
(defined scope)

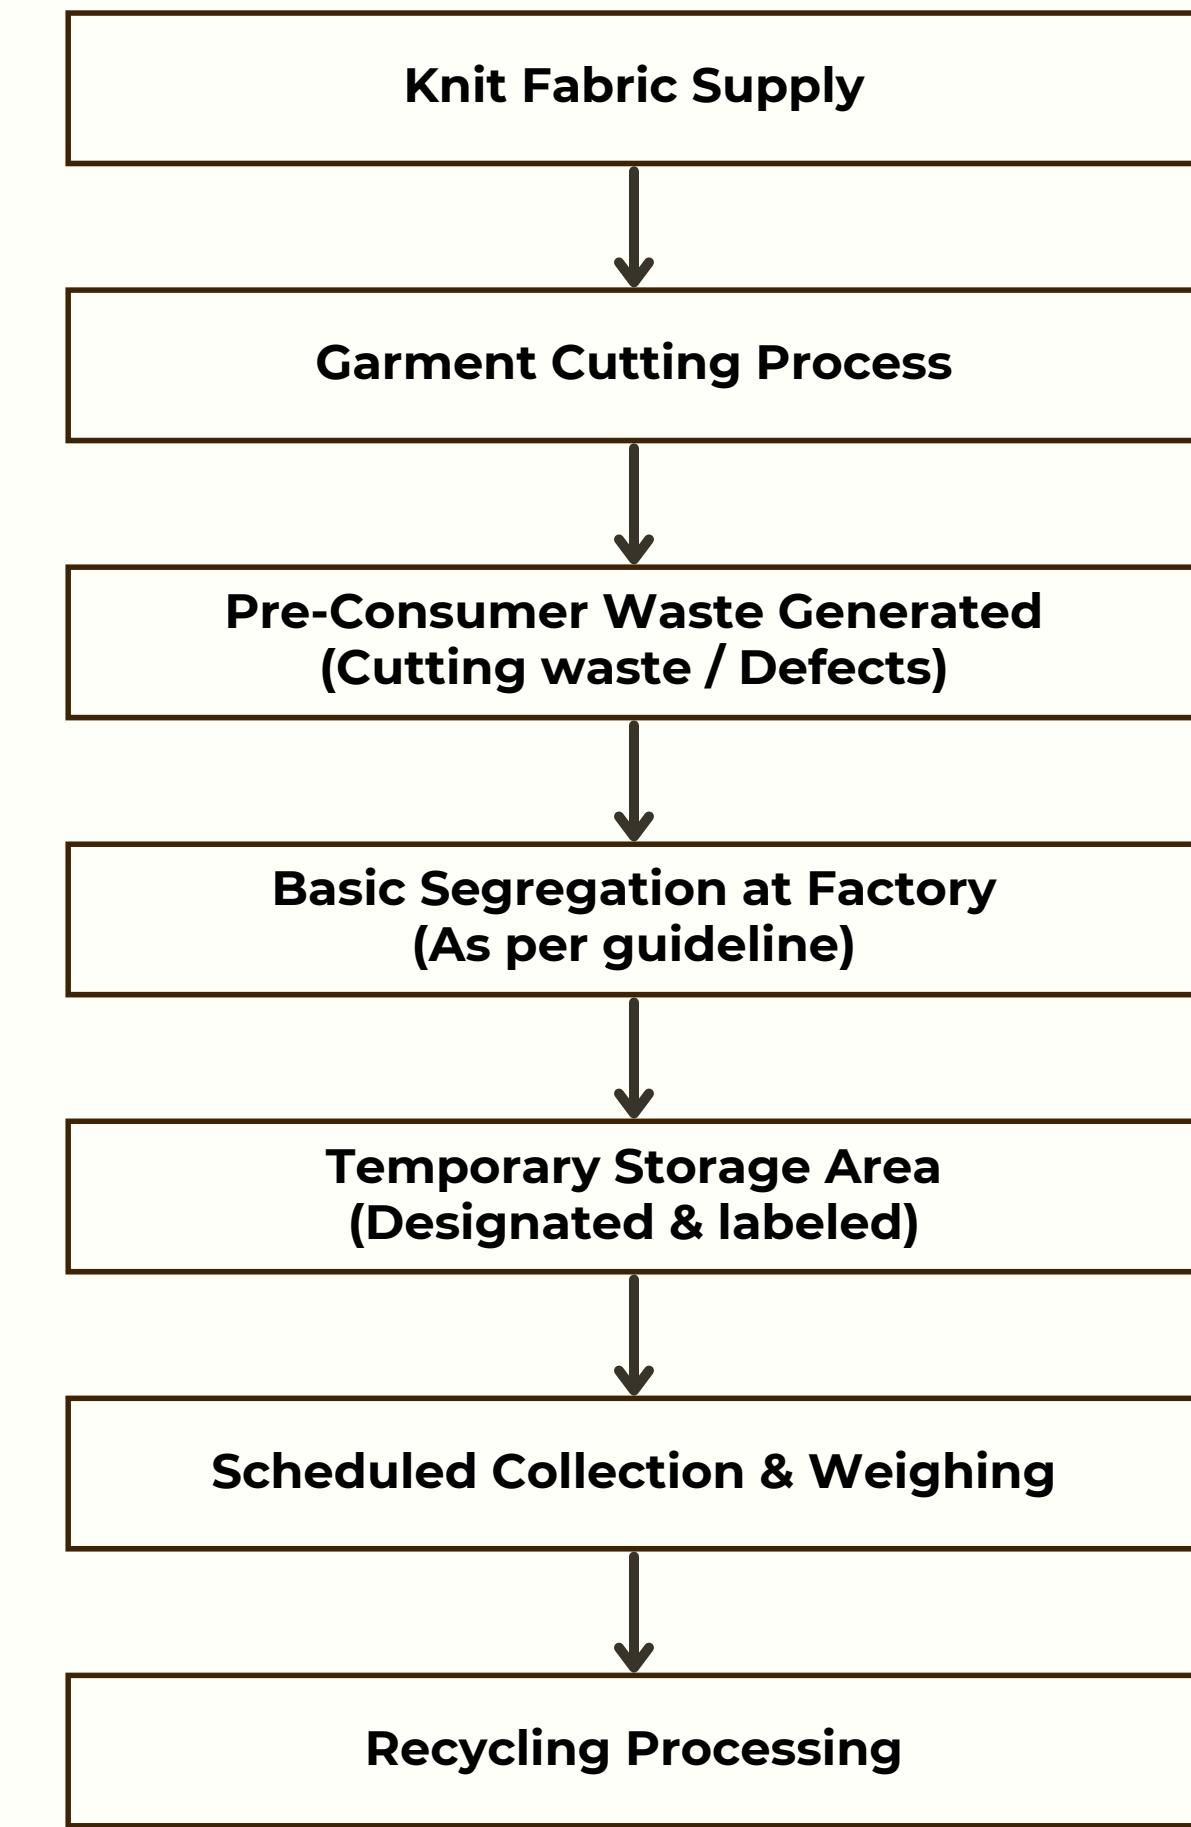

Waste types

- Pre-consumer only
(cutting waste,
production defects)

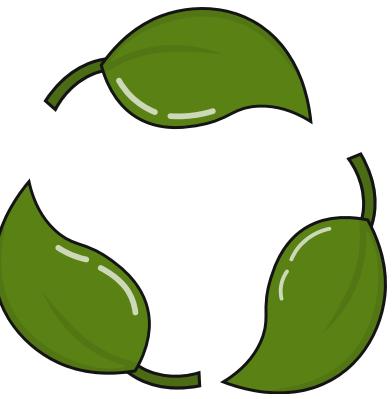

7 STEPS

HOW IT WORKS

WHAT GARMENT VENDORS GET

-  Clear waste handling solution for buyer audits
-  Official recycling partner instead of informal scrap sales
-  Basic ESG data & documentation
-  Participation in a closed-loop initiative without CAPEX
-  This program functions as risk reduction, not operational burden.

WHAT GARMENT VENDORS NEED TO DO

Segregate waste according to guideline

Store waste temporarily in designated area

Release waste for collection as scheduled

No change to cutting layout or production planning required

WHY THIS MATTERS

Buyers are asking tougher questions on:

Waste destination

Circular practices

Responsible sourcing

This program gives garment factories a real, defensible answer — backed by an actual operating partner.

POSITIONING STATEMENT

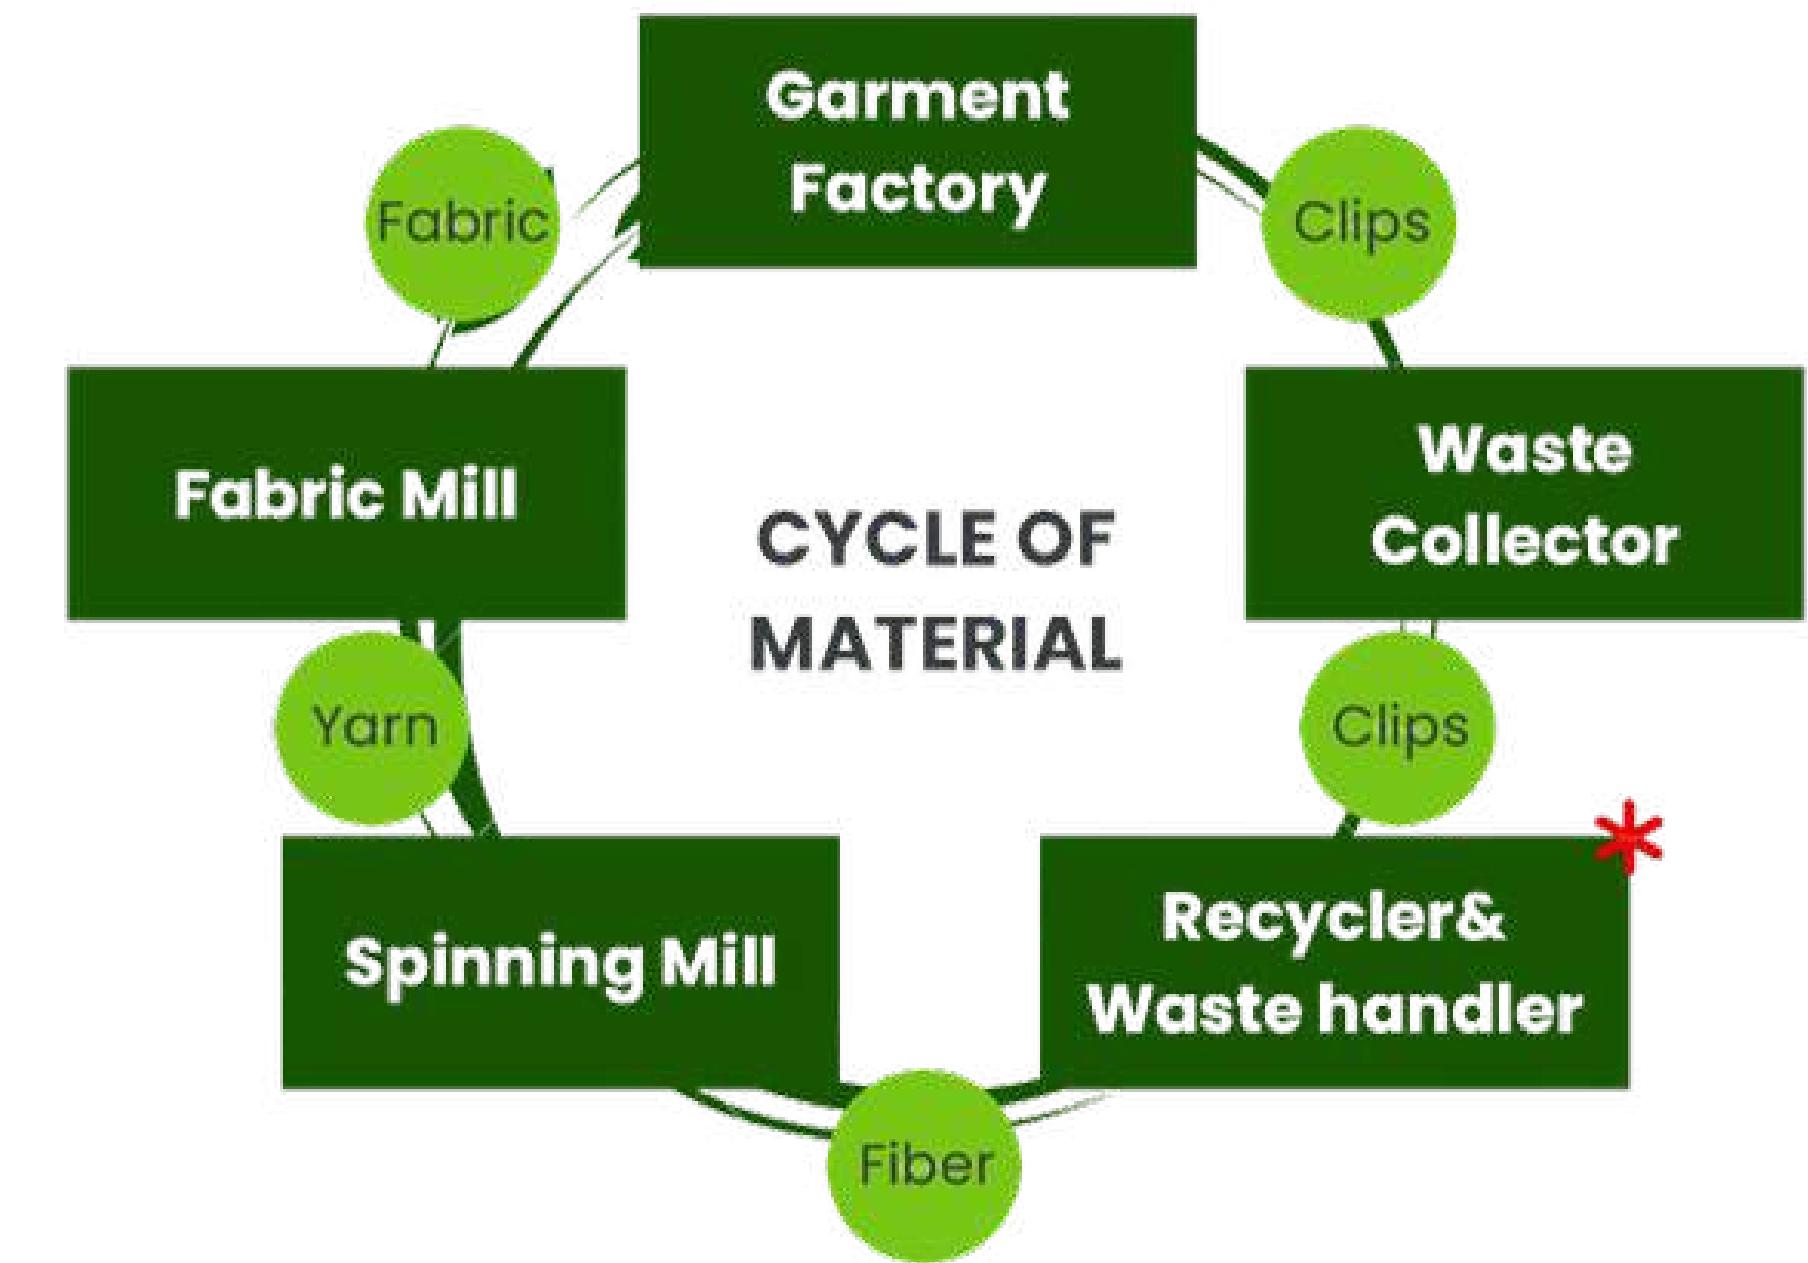

“ We don't just supply fabric.
We take responsibility for its after-life.”

MCSBASE

CYCLE OF MATERIAL

OEKO-TEX®
CONFIDENCE IN TEXTILES
STANDARD 100

SUSTAINABLE PRACTISES

The company invested heavily in exploring sustainable materials and manufacturing practices to minimize their environmental impact.
