

Dr. Bastiancich is CNRS researcher in the Gliomagenesis and Microenvironment group at the Institute of NeuroPhysiopathology (France). She has a background in Chemistry and Pharmaceutical Technologies and has obtained a PhD in the field of nanomedicine. Her group investigates the functional role of targets in brain tumors progression as well as the modulation of the tumor microenvironment following surgery and treatment. In this context, Dr. Bastiancich aims designing innovative drug delivery systems and test them in clinically relevant preclinical models.
