

Félix Sauvage is associate professor faculty of pharmaceutical sciences at Ghent University in Belgium. Félix has a general background in pharmacy and drug delivery. Since 2017, the use of pulsed-lasers in combination with light absorbing nanoparticles for the treatment of corneal and vitreous diseases has been his major focus. In 2022, Félix obtained an ERC starting grant ('DYE-LIGHT') to investigate the use of light in combination with dyes for drug delivery and laser-based surgery in the eye at Ghent University in the Laboratory of General Biochemistry and Physical Pharmacy.
