

## Money: Tips

- Being able to **count money is a very important skill** not just in math, but also in life!
  - You use it everyday in the real world.
- **Remember** all the values of coins
  - You **DON'T** want to pay more or less for an item!
- Use your **mental math skills** (addition, subtraction) to quickly pay in coins or bills
- Sometimes you will have to make change
  - Example: The item someone is buying from you costs \$15, and they give you \$20. You now have to give them back \$5.
