CHADAN

BREWING SMART TEA

ChaDan® is a single-use, compostable tea egg designed for the professional preparation of high-quality loose leaf tea in gastronomic environments or at home. It combines neutral sensory performance, elegant service, and environmental responsibility, without compromising infusion quality.

INTENDED USE

ChaDan® is an infusion tool designed to brew loose leaf tea: black, green, white, oolong, pu-erh or herbal infusions. It can be used to brew directly in a cup or mug. It is especially suited for quality environments such as fine dining restaurants, gourmet or specialty tea services, luxury hotels, palaces, private lounges, executive floors or institutional venues.

KEY FUNCTIONAL CHARACTERISTICS

- 01. Sensory neutral:** no taste transfer, no odor release, no interaction with tea aromatics.
- 02. Leaf expansion:** ChaDan® has sufficient internal volume to allow the tea leaf to fully unfold, with infusion quality similar to free loose-leaf brewing.
- 03. Service efficiency:** clean brewing without loose leaves in the cup or pot, reproducible tea results and an elegant design suitable for front-of-house service.

FOOD CONTACT & SAFETY

Suitable for contact with hot water and food, ChaDan® is designed for professional food service environments and an hygienic single-use experience.

MATERIAL COMPOSITION

ChaDan® is made from natural, bio-based fibres. Free from plastic, aluminum, staples, synthetic binders and without chlorine bleaching.

COMPOSTABILITY & END-OF-LIFE

ChaDan® integrates sustainability by design, without performance trade-offs or visible eco-marketing. Designed to support a plastic-free and low-impact tea service, ChaDan® is compostable under industrial composting systems and compatible with organic waste streams where accepted.
