

Pre-Treatment Instructions for Tatt2Away and Tatt2Revise

Prior to every Tatt2Away or Tatt2Revise treatment:

- From FIVE DAYS BEFORE treatment, electrolysis should NOT be used to remove hair in the area over and around the tattoo.
- TWO DAYS BEFORE treatment, use a good quality body scrub exfoliation product to remove dead skin cells in the area over and around the tattoo.
- If hair is growing over the tattoo, DO NOT SHAVE the area. We will do this immediately prior to your treatment. You cannot resume any method of hair removal until all the scabs have dropped off the new skin, which takes about three weeks.

For other than the first Tatt2Away or Tatt2Revise treatment:

- BEFORE ARRIVING for another treatment, make sure all wounds from prior TEPR treatments are fully healed.

Healed skin is considered MATURE when the homeostatic barrier function (against water loss, etc.) is reestablished. Maturation is complete when the PINKNESS of the new skin completely fades. About a week before full maturation, fading will first be seen around the outer boundaries of freshly healed skin. The fading will proceed inwards to the pink center.

- TWO DAYS BEFORE treatment, if the fresh skin covering any prior treatment wound is still pink, you should consult your Tatt2Away technician to decide if your treatment should proceed or be postponed.

If you have any questions, please call, or make notes so we can discuss them when you arrive for your appointment.

Cost Per Template/Per Treatment [\\$350 per Template/per Treatment/per Session](#)

Approximate Number of Treatments [Typically 3-5 Sessions within a 3x4 area. We can safely perform 2 3x4 areas per session.](#)
