## DESSERT WINES

Due to the proximity to Lake Neusiedl, the region also has ideal conditions for the production of selected quality wines with and without noble rot (*Botrytis*). Starting with the Beerenauslese, through the local reed wine, to the ice wine and the Trockenbeerenauslese, our range covers everything - if the vintage allows it. Every year is different here, which is why these positive whims of nature cannot be created every year.
