Letter of Recommendation

Shawn and his team from Data Net Communications are almost everything a customer can ask for. Not only was their pricing competitive, their time flexibility, quality of work, and expertise in the field of network cabling have surpassed their worth in dollars.

They installed over 1200 Gigabit and 43 coaxial connections at our new facility in early 2012. They were very prompt in getting things done, and even worked around our building contractor's needs on their own without a complaint. The professional work was done while giving the feel of a mom & pop shop, where typically a job of this size would have piles of statements of work full of change orders than actual work done.

This is one company that truly represents a firm that lives by "no job too big or too small." They will get the job done at a reasonable price, and you will not regret choosing them.

If you want additional information, I would gladly explain the work they have done in more detail.

Best Regards,

Kim Nguyen
IT Supervisor
