# TIPS TO TAKE CARE OF YOUR LAWN

NEIGHBOURS SHARING THEIR TIPS

"While we're all glad spring has arrived, we're not the only ones out and about — my cat Archer has been busy hunting moles, mice, and other unwanted yard visitors... sometimes a little too enthusiastically!"

Some of you may notice dry, patchy spots on your lawn. This can be caused by pets — or by tiny yellow insects.

To fix it, remove the dead grass, spread some garden soil, and apply coated grass seed. Coated seeds are great because they retain moisture, giving new grass a better chance to grow. According to Sandy Hildebrand, the best variety can be found at the Co-op on Range Road 120.

Living in the coulees means sharing our space with plenty of living creatures. If you're battling ants or those tiny, hard-to-see yellow insects, some neighbours have recommended Halt Pest Control for effective lawn treatment.

## MOLES IN YOUR YARD?

Some neighbours have found **ultrasonic repellent** from Amazon very effective.

## AFTER ALL, YOU MIGHT HAVE TO GET A CAT!

MY CAT HAS BEEN SUPER BUSY

## DESERT BLUME FLOWERS ARE COMING

After long research we have decided to hire **Blondie's** this year for planting flowers in our flower beds. You might have seen a person already cleaning up and getting the flower beds ready.

About couple weeks ago you probably noticed workers working at the Water Facility next to the 1<sup>st</sup> phase. If you wonder what they were doing - they were killing the GOFERS that have multiplied over the years.

## HAPPY SPRING!
