

HA736 Wide Blade Axial - 3 Baffle

Product Description

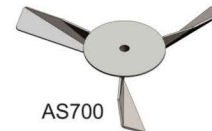

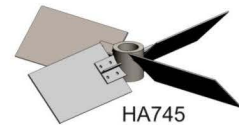

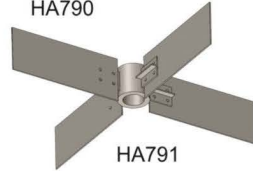

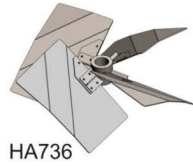

The HA736 is the latest generation 4 bladed wide blade axial type impeller, with very large blades. Designed as an alternative to the HA735, the HA736 is almost as efficient, while being among the most capable axial flow impellers. It can efficiently handle very high rates of gassing and is also suitable for rapid settling solids suspension applications and high viscosities.
