

**HOSPITAL COURSE:**

Patient was admitted and treated with individual, milieu, and group counseling. She was in the hospital previously and treated for major depression and substance abuse problems. She was readmitted after she was extremely unhappy and felt hopeless when her request for school was denied by the school district and she felt parents were not listening to her. She took an overdose of pills and was admitted for suicidal gesture. During the course of hospital stay she was restarted on Zoloft 50 mg. q am and Trazadone 50 mg. hs to help her with her sleep problem. During the course of hospital stay and individual counseling patient was able to change communication skills and was able to look at issues in a more realistic manner rather than being harsh on self. Patient improved with mental status being essentially stable at the time of discharge. She was discharged to be follow up as an outpatient.

**SPECIFIC MODULATES:**
