

PBE Vent Free Disclaimer

During the development of Platinum Bright Embers, tests were conducted in a CFM UVC-36 vent free fireplace. In our studies, we found that with the proper placement of the embers, that levels of CO, NO_x, and Hydrocarbons were reduced significantly. However, tests were not carried out on other vent free products. Vent Free products are carefully adjusted by the manufacturer to achieve low emission levels of the aforementioned pollutants. Advanced Catalyst Systems, LLC recommends against any modifications to a vent free log set which are not suggested by the original equipment manufacturer. **For more information contact your log manufacturer.**
