Elecnova

POWER QUALITY SOLUTION EXPERT

As the leading digital power distribution solution provider, Sfere Electric are dedicating on systematic solutions of energy management, power monitoring, power quality, electrical safety and intelligent switchgear to smart grid users. Our businesses focus on smart building, utility, large-scale industrial enterprise, renewable energy, semiconductor, IDC, advanced material, petrochemical, transportation infrastructure, education and health care industries.

Sfere Electric integrated R&D, manufacturing, marketing and service, and have a complete product ecosystem from digital measuring devices, intelligent switchgears, power quality mitigation solutions to IoT Cloud platform. We provide reliable data services for energy saving, electric safety, power quality improvement and comprehensive energy management to empower smart energy management by digitalization.

Benefits

The benefits of SFR active harmonic filtering :

- Prolong the use life of the equipment and reduce the initial devices investment
- Maintain the normal operation of equipment and stable production
- Reduce energy consumption, pay contribute to the environment protection
- Reduce the harmonic pollution of the public grid and get rewards from the power supply department

Hybrid Solution ·
SFR Series

The benefits of SFR series reactive power compensation equipments :

- Stabilize the voltage of the grid, enhance the power quality of the grid
- Improve the power factor of the power system and the load, reduce the capacity of the power system and the substation equipment investment
- Reduce line loss and improve the power transmission capacity of the grid
- Balancing the three-phase active power and reactive power of the grid
- Reduce the transformer losses and improve transformer utilized

TECHNICAL FEATURES

Fourier Algorithm

Adaptive system-
Effectively avoiding resonance-
Efficient and stable compensation-

IGBT Components

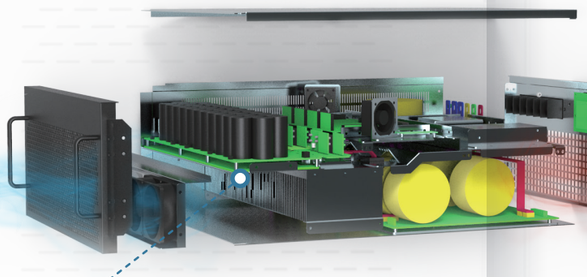
Quick response-
High tolerance performance-
Excellent thermal stability-

Complete Protection Features

Complete fault and off-limit protection functions-
Ensure the safe and stable operation of the system-

Efficient Heat Dissipation

Carefully designed cooling system-
Efficient thermal management-



DSP Extreme-speed Main Control Unit

-Full digital signal processing technology
-Fast and efficient implementation of complex algorithms

User Friendly HMI

-Full color touch screen
-Convenient parameter configuration
-Visualize system status and event recording

Remote Commissioning

-ELECNOVA cloud platform access
-Remote assistance to users for on-site commissioning

Modular Solution

-Compact modular design
-Higher energy density
-Easy maintenance

Active Harmonic Filter
SFR-APF

Various application

Excellent filtering performance

Excellent protection for equipment and system

User-friendly HMI

SFR-APF active harmonic filter is a new type of power quality improvement production for dynamically filtering harmonics and compensating reactive power. It can filtering and compensate harmonic (variable in orders and frequency) and dynamic reactive power in real time. It is used to overcome the shortcomings of conventional harmonic suppression and reactive power compensation methods such as passive harmonic filters, and achieve the harmonic filtering function and reactive power compensation function of the system. SFR-APF active harmonic filter is widely used in power, metallurgy, petroleum, port, chemical industry and mining enterprises.

Overview

The increase in power energy productivity has improved the standard of living, and most of the electrical loads used in the intelligent power consumption are nonlinear nowadays. Harmonic current is generated by these nonlinear loads, and is formed by the superposition of countless sinusoidal currents whose frequencies are integer multiples of the fundamental current. When all the waveforms are superimposed, they will become distorted waveform.

Static Var Generator
SFR-SVG

Various application

Excellent filtering performance

Excellent protection for equipment and system

User-friendly HMI

SFR-SVG is a new-generation product of Static Var Generator(SVG), it used the latest technology for the reactive power compensation. When the SFR-SVG parallel in the grid, it equalized as a dynamic reactive current source.The reactive current of the SVG could be flexibly controlled and compensate the reactive power automatically .

Overview

The SVG acquires the current signal of the load by the CT, the DSP tracks the command current in quick than calculate the reactive power rate of change by intelligent algorithm as to send the data to the IGBT by PWM signal. Finally the inductive or conductive power compensation current is generated on the inverter to achieve the real-time dynamic reactive power compensation.

Amplified Static Var Generator
SFR-ASVG

Smooth linear dynamic output

Dynamic filtering of odd harmonics of 13th and below

Friendly human-machine interface

Comprehensive protection function

Advanced control strategy and topology design

Based on the principle of voltage source inverter, the amplified static var generator (ASVG) uses insulated gate bipolar transistor (IGBT) to control the magnitude and phase of the inverter AC voltage, so as to achieve the purpose of reactive power compensation and harmonic control.

Technical Parameter

Item		Parameter
Rated Voltage		AC 400V ±10%
Working Frequency		50/60Hz ±5%
Compensation Range		-1~1
Number of Units in Parallel Connection		⩽8 units
Response Time		<10ms
Circuit Topology		Three-level
Electrical Wiring		3P3W/3P4W
Harmonic Filtering Range		3rd, 5th, 7th, 9th, 11th, 13th
MTBF		100,000 hours
Instantaneous Response Time		<200us
Compensation Mode		Harmonic compensation, reactive compensation and three-phase load unbalance compensation function
		Support setting one or more compensation methods
Control Connection		RJ45 connection, reliable and convenient
Compensation Effect	Reactive power	System power factor after compensation within the rated capacity＞0.98
	Active filter	Harmonic filtering rate within the rated capacity＞95%
	Three-phase unbalance	Unbalance of three-phase active current of the system after compensation within the rated capacity＜5%
Output Protection		The output current is automatically limited to 100% of the rated capacity
Ambient Standards		Ambient temperature -25°C~+55°C
		Relative humidity⩽95%, no condensation
		Installation altitude ⩽2000m, if installation altitude ＞2000m, please adopt reduced capacity design.

Harmonic mitigation

SFR-M series LV(low voltage) dynamic harmonic mitigation reactive power compensation module is designed for solve the problem of harmonic and power factor in the situation of slight harmonic pollution in 0.4kV low voltage power distribution network. It is used as an integrated reactive power compensation module with functions of power factor enhancement, effective harmonic suppression, reduction of line loss and improvement of power quality.

SFR-L

Intelligent

Zero-crossing

SFR-L series LV(low voltage) power capacitor module is designed for 0.4kV LV power distribution system. It is used as a new generation of compensation module with functions of energy saving, reduction of line loss, power factor enhancement and improvement of power quality. This module is mainly used in the occasions where the harmonic distortion is not serious. SFR-L series low voltage power capacitor modules take two type compensation capacitors or one Y type compensation capacitor as main body and are highly integrated with compound switch, microprocessor and other function modules.

Communication	Internal		RJ45 interface, connect up to 32 SFR series modules
	External		Support Modbus-RTU protocol
Relay Outputs			2 programmable alarm relay outputs Capacity 3A/250VAC (3A/30VDC)
Accuracy			Current: 0.5(20%～120%), 1.0 (5%～20%)
			Voltage: 0.5 (50%～120%), 1.0 (5%～50%)
			Power : 1.0
			Frequency: ±0.1Hz
			Harmonic measurement: B
Display Mode			128*64 LCD, contrast can be set
Protection Degree			Panel IP65, case IP30
Ambient Condition			Working temperature: -15～55℃
			Storage temperature: -20～75℃
Safety			Insulation between signal, power supply , output terminal and case resistor > 100MΩ
			Withstand voltage between signal input, power supply and output > AC 2kV
Outline Dimension			Outline dimension: 120×120×114mm
			Weight: 0.6kg

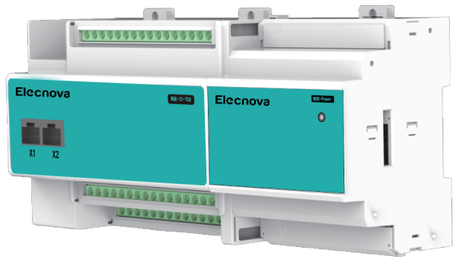
Reactive Power Compensation Controller
WGK-31-700

Real-time monitoring

Power factor correction

Harmonic analysis

Smooth network & communication



Reactive power compensation controller WGK-31-700 is a device special for correcting power factor and compensating reactive power, which has automatic detection and control functions. By utilized the advanced visual analysis tools, combined with power quality monitoring device to achieve the professional control and management of power quality.

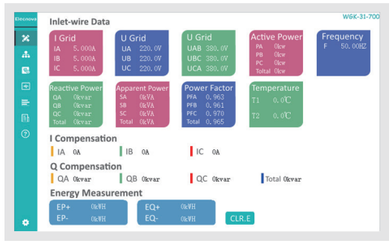
	Current	Value	5A
		Overload	Continuous: 1.2In Instantaneous: 2In
		Consumption	< 1VA
	Frequency		45～65 Hz
Power Supply			AC/DC 80～270V
Reactive Power Control		Level	21 steps Combined compensation
		Communication	RJ45 interface, connect up to 32 SFR-M modules
Alarm Output			1 Programmable alarm relay output Capacitor 5A/250VAC（5A/30VDC）
External Communication			Modbus-RTU protocol, 1200～19200bps（Level mode）
Event Records			100
Measurement Accuracy			Incoming U, I, P: Class 0.5 Incoming EP: Class 0.5S Incoming EQ: Class 1 Frequency: ±0.1Hz THD: 1～31st, Class B Compensation current: Class 1 (20%～120%) Temperature measuring: ±1℃
Display Mode			7inch TFT touch screen
Ambient Condition			Operation temperature：-15～55℃ Storage temperature：-20～75℃
Safety			Insulation: Signal, power supply, output terminal to shell resistance ＞100MΩ Withstand voltage: between signal input, power supply, and output >AC 2kV

Advantages



REAL-TIME MONITORING AND CONTROL

- Real-time monitoring and control of electrical equipment in power distribution network.
- Dynamic user interface combines real-time display and control functions to achieve more effective control and higher operation efficiency.
- Monitor the power factor fluctuation and compare the power factor before and after compensation.

ALARM ACTIVATION

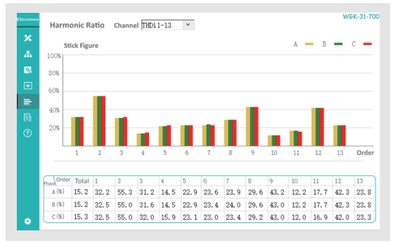
- If trigger an alarm under certain conditions, the independent screen will show the alarm and sequentially record events and all relevant data for diagnosis.

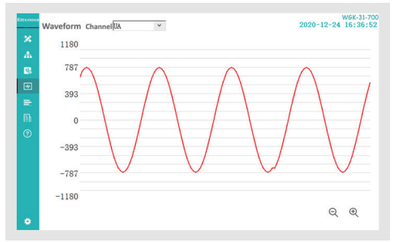
HARMONIC ANALYSIS

- 1-31st Harmonic analysis data with graphics and tables

EXTENSIBLE

- Measuring data could be integrated to any third party monitoring system by standard communication protocol





OPERATION AND MANAGEMENT

- Operation and management functions including capacitor module replacement reminder, residual capacity and cumulative operation time calculation, which can provide real-time data for on-site maintenance personnel to ensure the safe operation of reactive power compensation device.
- Clear software architecture, smooth network and communication, ensure data quality and support fault tolerance.

Dynamic response

Zero-crossing

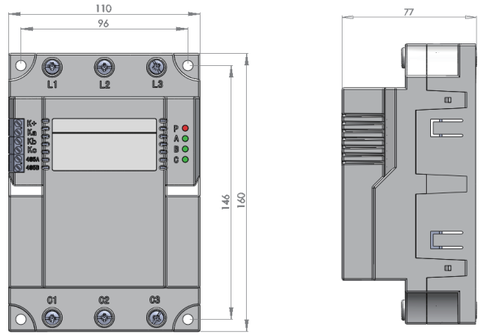
Million mechanical life cycles

LBFK series low-voltage compound switch refers to connecting SCR and magnetic latching relay in a parallel way, adopting internal single chip for controlling, making SCR undertakes zero-passing switching at the moment of switching, i.e. switching on when the voltage passes zero and switching off when the current passes zero; the conducting time of SCR is very short (doesn't generate heat), and then, the magnetic latching relay will be connected for running.Therefore, it has advantage of SCR switch that there is no inrush current in case of passing zero, and the advantage that there is no power loss when the AC contractor is running. In this case, defects including heating during the running of SCR and spark in case of contactor switching are avoided. It is a kind of relatively ideal switch. particularly there is no inrush current or spark when the magnetic latching relay is on or off, the use life of its electrical apparatus is longer than the design use life , and its mechanical use life reaches millions of times, which may guarantee long-term running.

Technical Parameter

Items	Parameters
Rated Voltage	AC wire voltage 400V±20%
Rated Frequency	50Hz
Harmonic Distortion	⩽5.0%
Control Voltage	5～40kvar
Power Consumption Of The Machine	DC 12V± 10%/ 10mA
Consumption	⩽4VA
Contact Resistance	⩽2mΩ
Ambient Temperature	-25～+55℃
Switching Times	1.20 million times
Altitude	⩽2000m

Dimension



External dimension:110×77×160 mm (width × depth x height)
IInstallation dimension:96×146 mm (width × height); the screw type M5*20.

Wiring Method

Items	Port	Description
Main Circuit	L1,L2,L3	Wire incoming end;
	C1,C2,C3	Connected to the capacitor (or series reactor) end
Modbus	485A	Communication interface A
	485B	Communication interface B
Control Circuit (G Type)	K+ end	The positive end of control voltage is connected with COM end of the controller.
	Ka+ end	The negative end of control voltage is connected with output end of each circuit of the controller.
	Kb+ end	Empty
	Kc+ end	Empty
Control Circuit (F Type)	K+end	Positive end of control voltage
	Ka+end	Phase-A control end
	Kb+end	Phase-B control end
	Kc+end	Phase-C control end

Note: The indicator P refers to power source lamp; when the main circuit is enable, the indicator will be on; otherwise, indicator will be off. When G type is switched on, indicators A, B and C refer to switching indication. In case of switching on, the indicators will be on, otherwise, the indicators will be off.
When F type is switched on, indicators A, B and C respectively refer to three-phase switching indication. In case of switching on, the indicators will be on; otherwise, the indicators will be off.

LBT

Dynamic response

Zero-crossing

Thyristor applications

LBT series dynamic switching unit refers to a kind of contactless rapid switch with high reliability, and it is used in dynamic power factor compensation equipment. Particularly apply to switching occasions requiring rapid and no-wearswitching. It is usually applied into occasions where reactive change is frequent,such as lifting equipment, elevator and electric welding machine.

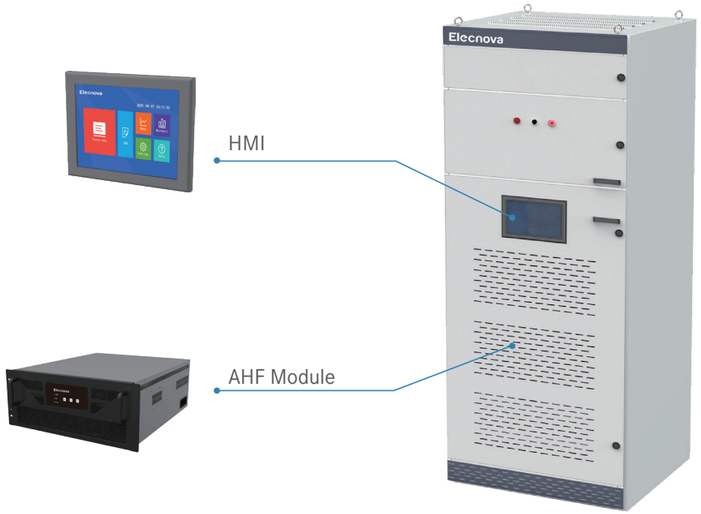
easy to expand

LCD

7”/10” LCD
touch screen

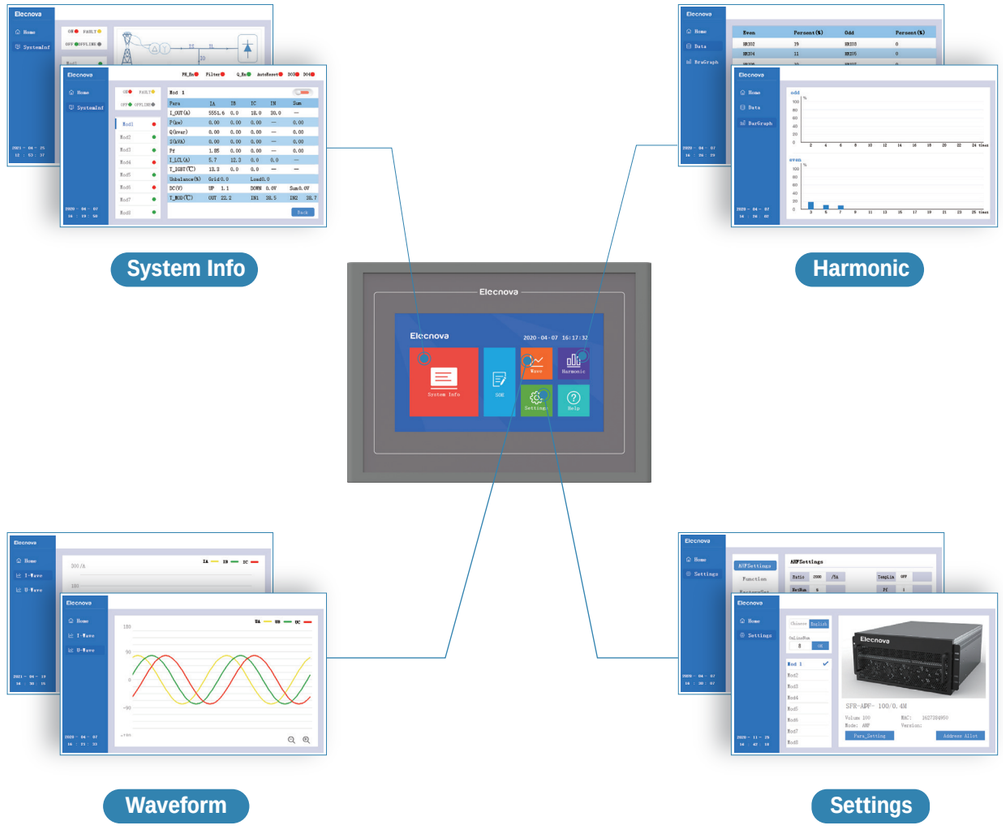
2-51st Harmonic filtering
THD＜3%

Supports parallel connection
of modules with different
capacities



SFR-APF active harmonic filter is a new type of power quality improvement production for dynamically filtering harmonics and compensating reactive power. It can filtering and compensate harmonic (variable in orders and frequency) and dynamic reactive power in real time. It is used to overcome the shortcomings of conventional harmonic suppression and reactive power compensation methods such as passive harmonic filters, and achieve the harmonic filtering function and reactive power compensation function of the system. SFR-APF is widely used in power, metallurgy, petroleum, port, chemical industry and mining enterprises.

HMI Display



- 7/10 inch full color LCD optional
- Real time display of signal detection, data processing and calculation in power system
- Visualization of power quality data and charts
- Monitoring and function setting of module working status
- Quick view of SOE events

Static Var Generator
SFR-SVG

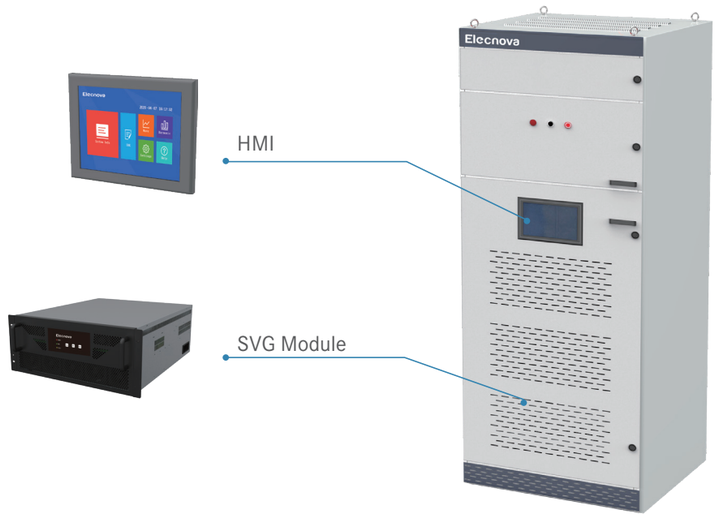
Modular design
easy to expand

LCD

7”/10” LCD
touch screen

Total response time ＜ 10ms
and faster control

Supports parallel
connection of modules
with different capacities



SFR-SVG is a new-generation product of Static Var Generator(SVG), it used the latest technology application for the reactive power compensation. When the SFR-SVG parallel in the grid, it equalized as a dynamic reactive current source.The reactive current of the SVG could be flexibly controlled and compensate the reactive power automatically.

1600	SFR-SVGM4-250(50)/0.4	2	1000×800× 2200
2000	SFR-SVGM4-300(50)/0.4	2	1000× 1000×2200
2500	SFR-SVGM4-375(50)/0.4	2	1000× 1000×2200

Note: Types M,B and G can be selected according to site situation.

Technical Parameter

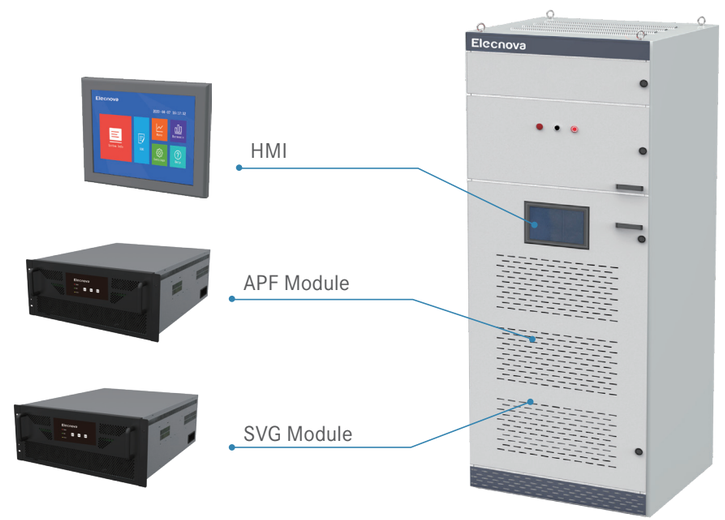
Item		Parameter
Single Cabinet Compensation Capacity		100～400kvar
AC Input	Rated Voltage	400V ±10%
	Rated Frequency	50Hz ±5%
	Wiring Method	Three phase four wire
Technical Indicators	Target Power Factor	0.99
	Split-phase Compensation Capacity	30～100%
	Harmonic Compensation Times	Specific times
	Response Time	≤10ms
	Overload Protection	Automatic adjustment
Working Mode		Automatic or manual
Communication Interface		RS485 / Ethernet optional
Protection Level		IP20
Display Interface		7 / 10 inch touch screen (optional)
Altitude Requirement		≤1000m，high altitude projects can be customized
Parallel Operation		Available
Cooling Method		Forced air cooling
Operating Temperature		-25℃～45℃
Storage/transport Temperature		-40℃～70℃
Operating/storage Relative Humidity		Relative humidity 20%～95%, no condensation/ relative humidity 10%～95%, no condensation
Single Cabinet Dimension		1000×1000×2200
Noise		<65dB(A)
Other		Non-standard sizes can be customized, special requirements can contact SFERE
SFR-M Module		Capacity：10～50kvar optional
		Reactance rate：7% and 14% optional

Hybrid Compensation Device
SFR-APF-SVG

Active filtering
& Reactive power compensation

Intelligent
operation

Flexible
smoothing



SFR-APF-SVG combines the SFR-APF module and the SFR-SVG module to compensate for the reactive power of the system while supplementing the harmonics of the system.

Overview

Model Description

SFR-APF-SVG ① 4 ② – 50 ③ – 200 ④ / 0.4 ⑤

Annotation:

1. Model of the manufacturer
2. Wiring mode:
   3-Three-phase three-wire
   4-Three-phase four-wire
3. Capacity of AHF(A)
4. Capacity of SVG(kvar)
5. Voltage level(kV)

Technical Parameter

Function	Specification
Rated Voltage	400V ±10%
Rated Frequency	50Hz ±5%
Wiring Method	3P3W/3P4W
Reactive Power Compensation Capacity	50~300kvar
Phase Separation Compensation Ability	100% with phase compensation
Active Filtering Capability	50A~300A
Harmonic Compensation Times	2~51st
Response Time	⩽5ms
Overload Protection	Can be set automatically
Active Power Loss	<3% rated power
Working Mode	Automatic or manual
Communication Interface	RS485, Modbus-RTU
Protection Level	IP20
Display Interface	7/10 Inch touch screen(optional)
Altitude	⩽1000m，High altitude projects can be customized
Parallel Operation	Can achieve
Cooling Method	Forced air cooling
Operating Temperature	-25℃~45℃
Storage/transport Temperature	-40℃~70℃
Operating/storage Relative Humidity	Relative humidity 20% ⩽ 95%, no condensation /Relative humidity 10% ⩽ 95%, no condensation
Single Cabinet Size	1000×1000×2200
Noise	<65dB(A)
Other	Non-standard dimensions can be customized, special requirements can contact ELECNOVA

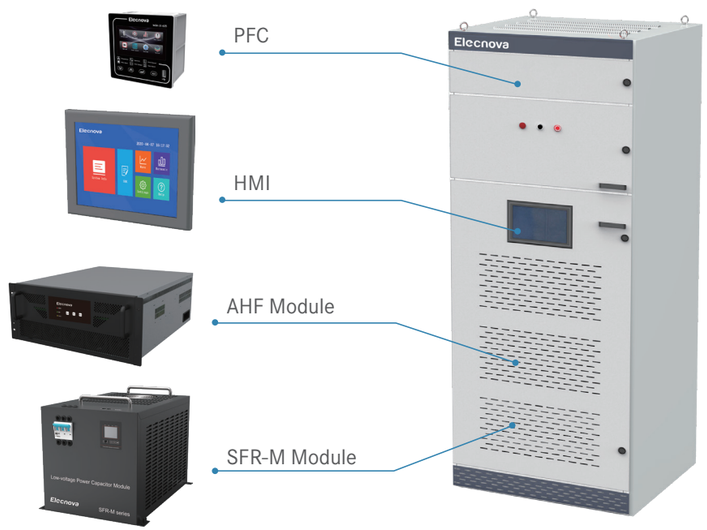
Hybrid Compensation Device
SFR-APFM

Hybrid compensation

Cost-effective

Flexible smoothing

Self-diagnosis



SFR-APFM is the combination of a SFR-APF active harmonic filter and SFR-M harmonic suppression compensation module in a cabinet for accurate continuous compensation.

Overview

Model Description

SFR-APFM ① 4 ② – 50 ③ – 200 ④ / 0.4 ⑤

Annotation:

① Model of the manufacturer

② Wiring mode:
3-Three-phase three-wire
4-Three-phase four-wire

③ Capacity of AHF(A)

④ Capacity of SFR-M(kvar)

⑤ Voltage level(kV)

Technical Parameter

Function		Specification
Single Cabinet Compensation Capacity		100~400kvar
AC Input	Rated voltage	400V ±10%
	Rated frequency	50Hz ±5%
	Wiring method	3P3W/3P4W
Technical Indicators	Target power factor	0.99
	Split-phase compensation capacity	30~100%
	Harmonic compensation times	2-51st
	Response time	⩽10ms
	Overload protection	Automatic adjustment
Working Mode		Automatic or manual
Communication Interface		RS485, Modbus-RTU
Protection Level		IP20
Display Interface		7/10 inch touch screen (optional)
Altitude Requirement		⩽1000m, high altitude projects can be customized
Parallel Operation		Available
Cooling Method		Forced air cooling
Operating Temperature		-10℃~45℃
Storage/transport Temperature		-25℃~70℃
Operating/storage Relative Humidity		Relative humidity 20%~95%, no condensation/ relative humidity 10%~95%, no condensation
Single Cabinet Dimension		1000×1000×2200 mm
Noise		<65dB(A)
Other		Non-standard sizes can be customized, special requirements can contact SFERE
SFR-M		Capacity: 10~50kvar optional
		Reactance rate: 7% and 14% optional

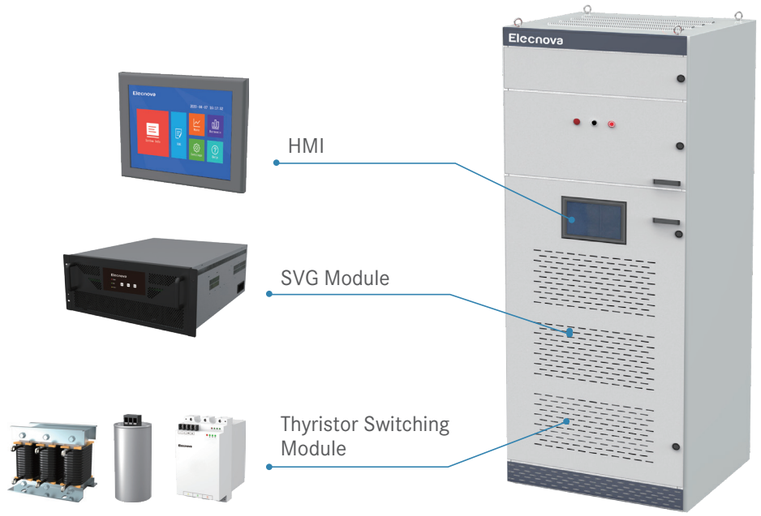
Hybrid Compensation Device
SFR-SVGC

Hybrid compensation

Cost-effective

Flexible smoothing

Self-diagnosis



SFR-SVGC is the combination of SFR-SVG static var generator and thyristor switching module in a cabinet for accurate continuous compensation.

Overview

Model Description

SFR-SVGC ① 4 ② – 200 ③ – (50) ④ / 0.4 ⑤

Annotation:

1. Model of the manufacturer
2. Wiring mode:
   3-Three-phase three-wire
   4-Three-phase four-wire
3. Total Capacity (kvar)
4. Capacity of SVG(kvar)
5. Voltage level(kV)

Technical Parameter

Function		Specification
Single Cabinet Compensation Capacity		100~400kvar
AC Input	Rated voltage	400V ±10%
	Rated frequency	50Hz ±5%
	Wiring method	3P4W
Technical Indicators	Target power factor	0.99
	Split-phase compensation capacity	30~100%
	Harmonic compensation times	Specific times
	Response time	⩽10ms
	Overload protection	Automatic adjustment
Working Mode		Automatic or manual
Communication Interface		RS485, Modbus-RTU
Protection Level		IP20
Display Interface		7/10 inch touch screen (optional)
Altitude Requirement		⩽1000m, high altitude projects can be customized
Parallel Operation		Available
Cooling Method		Forced air cooling
Operating Temperature		−10℃~45℃
Storage/transport Temperature		−25℃~70℃
Operating/storage Relative Humidity		Relative humidity 20%~95%, no condensation/ relative humidity 10%~95%, no condensation
Single Cabinet Dimension		1000×1000×2200 mm
Noise		<65dB(A)
Other		Non-standard sizes can be customized, special requirements can contact SFERE
Thyristor Compensation Module		Capacity: 10~60kvar optional
		Reactance rate: 7% and 14% optional
