

# nord

Our unique kitchen series inspired by the untouched nordic wilderness with its clean water and fresh air.

# nord <sup>10</sup>

**nord 10** is our premium kitchen system that provides up to 10 litres of safe drinking water per minute, and can be connected straight to your existing kitchen faucet. This system gives you safe and pure water for drinking, cooking, washing and can be installed hidden under the kitchen sink to integrate seamlessly with your kitchen design. The high flow rate makes it possible to connect an additional outlet such as a fridge, ice machine, coffee machine etc.

It's a complete system with a 50 Micron Washable Pre-Filter **(1)**, a 5 Micron Sediment Filter with antimicrobial technology **(2)** and a 5 Micron Activated Carbon Block Filter **(3)** to remove sediment, taste/odour and Chlorine. The final step is a highly effective UV-purification unit **(4)** to kill any harmful bacteria and microbes invisible to the human eye. The easy-to-install system uses 1/2" stainless steel hoses for inlet and outlet water connections. Each unit comes complete with a 16W UV lamp and filter cartridges.

29,900,-

Washable 50 micron pre-filter

Removes sediment

Removes chlorine, taste and smell

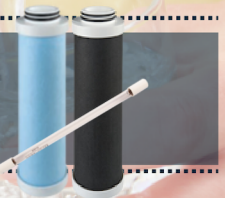

Eliminates virus and bacteria

**Connection Size Inlet:** 1/2" Female (stainless steel flexible hose)
