

Lab Test® Products

An Investment In Quality

GRID PLATES & DIFFUSERS

- ★ **490 Plus®** Grid Plates
- ★ **Lab Safe®** Grid Plates
- ★ **Thermal Dry®** Grid Plates
- ★ Resilient Grid Plates (RG)
- ★ SteamWeave™ Diffusers **NEW**

PRESS PADS

- ★ Excel Pads
- ★ Clean Pads
- ★ Slick Pads
- ★ Unique Pads

COVERS & ACCESSORIES

- ★ Insulating Head & Buck Covers
- ★ Puffer Covers
- ★ Laundry Covers & Felts
- ★ Ironing Board Covers
- ★ Pressing Machine Hose Covers
- ★ Iron Hose Covers
- ★ Iron Parkers — custom available
- ★ Steam Tunnel Bags

Lab Test® Insulating Head & Buck Covers

300° → 120°

RADIATED HEAT

5–7%

ENERGY COST SAVED

Cooler heads mean faster, more accurate operators.

U.S. Patent No. 5,755,049

NASA STUDY

Research on factory workers has shown that excessive heat slows workers down and increases the likelihood of safety incidents, poor morale, absenteeism, and turnover.

"I have reviewed the performance of the Lab Test Insulators and determined that these covers will save approximately 5% to 7% of the operating energy cost. The cover reduces heat loss while providing a safer head operating temperature...resulting in saving energy and protecting workers from hot surfaces."

Stanley Fox, Professional Engineer

Senior Engineer for the design and construction of nuclear and fossil-fueled power plants

LABOR IS YOUR **BIGGEST** PRODUCTION COST

Lab Test® Products Maximize Your Efficiency for Quality and Productivity

OUR ENTIRE PRODUCT LINE CAN BE CUSTOM-MADE TO FIT ANY APPLICATION

★ Grid Plates & Diffusers ★

★ 490 Plus® Grid Plate

The industry-standard cloth-covered plate, used as original equipment by leading press manufacturers. 490 Plus® cloth delivers the highest-quality finish at a competitive price — the longest-lasting, best-performing plate available.

★ Lab Safe® Grid Plate

A PTFE-coated grid plate for linens, cottons, and other fabrics that demand maximum heat. A baked-on heavy PTFE finish over a proven metal diffuser holds up to repeated high-temperature pressing.

★ Thermal Dry® Grid Plate

Extra layers of cloth plus a metal diffuser give this plate the driest press available — ideal when silks, rayons, and other fine fabrics need dry finishing without leave-off marks.

★ Resilient Grid Plate (RG)

Cloth-covered with a layer of pile material between the outer cloth and inner diffuser — the right choice for fabrics that need a soft press with no leave-off marks.

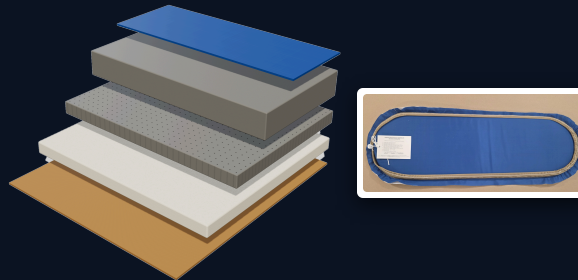

★ SteamWeave™ Diffuser **NEW**

Sits between press head and grid plate, angling steam evenly through slotted dimples for more consistent heat on every pass. Ask your distributor about availability.

PLEASE NOTE: all grid plates are constructed of two metal plates — an inner metal diffuser and an outer rigid perforated metal plate.

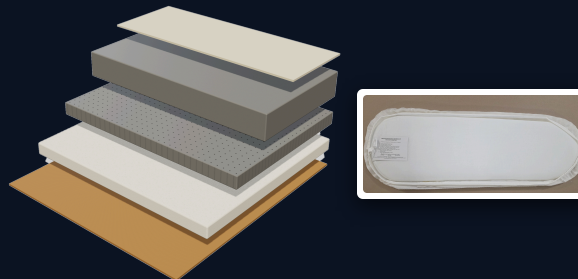

★ Standard Press Pads ★

★ Slick Pad

3-layer internal construction. The workhorse of the dry cleaning industry. Features a Blue Slick Polyester surface for easy garment movement during pressing, with double-layer rubber and skirted construction for superior steam and vacuum passage.

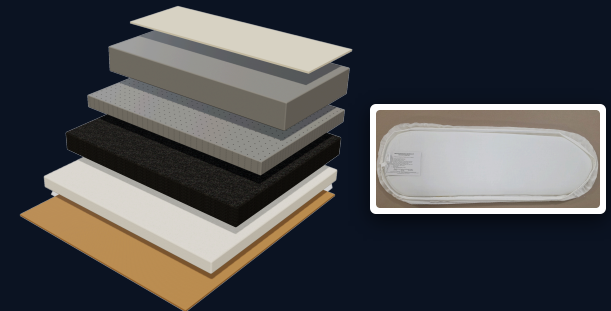

★ Clean Pad

3-layer internal construction. Designed for problem fabrics and precision pressing. The Clean Pad features a PTFE-Nomex surface that prevents moiré and texture marks on silks, rayons, and other delicate garments — and is the preferred pad for pressing military uniforms.

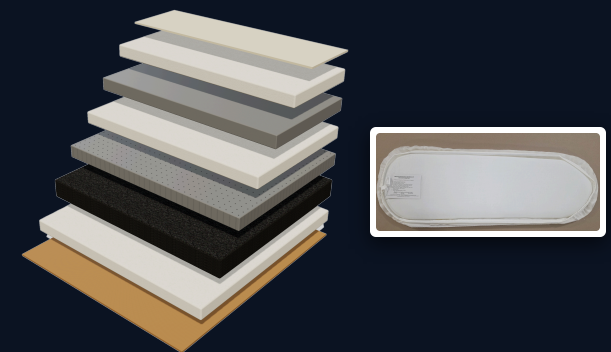

★ Specialty Press Pads ★

★ Excel Pad

4-layer internal construction. Our premium pad. The Excel Pad adds a layer of black foam to our proven 3-layer construction, delivering superior cushion and improved steam flow for a noticeably better press.

★ Unique Pad

6-layer internal construction. Using specialty rubber and black foam, the Unique line is designed to withstand the intense heat of hot head machines while maximizing steam flow and extending pad life. The Unique Pad features a PTFE-Nomex surface combined with a precision-engineered 6-layer build.

PLEASE NOTE: all pads are made to the specific size, model, and manufacturer of your machine.
