Progettare con gli aromi / Designing with aromas

Recentemente Italesse ha ulteriormente ampliato il proprio savoir-faire professionale relativo al mondo del vino con Senses, un progetto che ha come obiettivo finale quello di coniugare emozioni ed eccellenza tecnica nella degustazione. Il team di Italesse Senses ha rivoluzionato il modo di immaginare e progettare i prodotti destrutturando i singoli vini in aromi, testando i calici sia con il vino che direttamente con ribes, lamponi, pepe nero, e apportando essenziali modifiche e micro-modifiche alla struttura del bicchiere per migliorare proprio le percezioni sensoriali ed olfattive. Questo lavoro ha permesso di andare oltre l'idea del calice varietale perché ogni vino è unico e, ad esempio, un pinot nero di una regione è a volte molto diverso da quello di un'altra. Si afferma così l'idea del calice emozionale che rispetta l'unicità di ogni vino e le sensazioni organolettiche ad esso legate. L'attenzione di Italesse ai dettagli, alla qualità dei materiali, all'efficienza tecnica professionale dei prodotti, nonché verso l'atto creativo è, ormai da tempo, affiancata dall'impegno verso temi come l'etica e l'ambiente che ci circonda. Impegno che è stato premiato, al termine del 2019, con la medaglia d'argento EcoVadis, prestigioso riconoscimento internazionale relativo alla sostenibilità.

Lately, Italesse further expanded its professional savoir-faire related to the wine world with the new Senses project, which aims to combine emotions and technical excellence in the tasting experience. The Italesse Senses team completely transformed the way the products are designed and imagined, deconstructing the individual wines into aromas by testing, for instance, the stem glass directly with wine as well as with only currants, raspberries, and black pepper. Then comes essential changes - sometimes incredibly tiny - to the stem glass structure, which greatly improves sensorial and olfactory perceptions. The work done by the Italesse Senses team goes beyond the idea of the varietal stem glass because every wine is unique, like a Pinot Noir that can differ greatly from one region to another. The results of this work establishes the idea of the emotional stem glass, which respects the uniqueness of each single wine and its own organoleptic sensations. For some time now, the company's attention for detail, high quality materials, professional and technical efficiency for products, as well as creativity line up with Italesse's awareness for ethics and the environmental concerns that surround us. At the end of 2019 EcoVadis, a prestigious international award relating to sustainability, rewarded the company's commitment for these themes with the silver medal.

A photograph of four wine glasses filled with different types of wine, arranged on a dark wooden bar counter. The background is a blurred bar with shelves of bottles and warm lighting. The glasses from left to right contain: a dark red wine, a light yellow wine, a dark red wine, and a light yellow wine with a thick head of foam. The lighting is dramatic, highlighting the shapes of the glasses and the colors of the wine.

Italesse dà vita ai propri prodotti studiandone ogni dettaglio, traducendo la funzionalità in emozioni percepite attraverso il gusto e la vista. Know-how professionale e cultura del design guidano ogni atto creativo dell'azienda. | Italesse creates its products by studying every single detail, translating functionality into emotions perceived through taste and sight. Professional know-how and design culture lead every creative act of the company.
