

2022 Edge Eyewear Catalog

TACTICAL PRODUCT OFFERING

Kurt Daems CEO

In the spring of 1994, I walked into a drywall distributor in Salt Lake City, Utah, looking to sell my first pair of safety glasses. I was introduced to a buyer they called “Moose.” I began my carefully prepared presentation about the features of the product, only to be interrupted by a customer who walked in the store, grabbed the glasses from my hand and put them on. “Hey Moose, how do I look?” he asked. “Lookin’ good my friend. But, more importantly, these glasses are safety rated and will protect your eyes” Moose said. Without any additional information, the customer ordered 24 pieces for his crew, grabbed a handful of sunflower seeds from the bucket on the counter and walked out the door. That day, I learned volumes about the trust, relationships and loyalty that exist between distributors and customers.

For 27 years, this business, and the success of the Edge brand, has relied heavily on the power, credibility and reach of our distributors to bring this top-tier safety eyewear to the consumer. The result has been millions of happy customers wearing Edge. But, even more important is the hundreds of letters we have received with stories about saved eyes. At the end of the day, the Edge brand was created to protect people and their lifestyle. Meeting the customers whose lives have been positively impacted by our products has been very rewarding, and we acknowledge we never could have connected to these consumers without our loyal distributors.

As is typical, there is always an evolution in the way products go to market and savvy distributors roll with these changes—or even lead the way. At Edge, we value our solid distribution network and are excited to roll with this evolution. This year is shaping up to be an unprecedented one to “work together” in many exciting new ways with our distributors, so stay tuned as big things are coming!

CHOOSE A LENS FOR THE FOLLOWING CONDITIONS:

Standard	Overcast	Reflective (for Polarized)	Lasers
Bright, Clear Conditions Indoor, Low Light Conditions	Partly Cloudy Conditions Hazy Conditions	Cloudy Conditions Desert, Reflective Conditions Water, Reflective Conditions	High Altitude Snow, Clear Conditions High Altitude Snow, Cloudy Conditions Lasers

CONDITIONS	LENS COLORS & TRANSMISSION OPTIONS	SOLUTIONS BASED ON EYEWEAR NEEDS
	CLEAR LENS 85% Light Transmission	Clear lenses are the classic option for safety. With pristine clarity, they are an excellent choice for indoor and low light conditions.
	TIGERS EYE 50% Light Transmission	Tiger's Eye lenses make outdoor conditions appear sharper by filtering high levels of blue light to allow for greater depth perception and a brighter view of surroundings.
	COPPER LENS 8% Light Transmission	Copper lenses make outdoor conditions appear sharper by filtering high levels of blue light. Copper also increases depth perception and contrast, making it the ideal tint for daytime driving and golfing.
	PHOTOCHROMIC 22-87% Light Transmission	The Photochromic lens will transition from light to dark as it is exposed to UV rays, adapting to your environment to providing visual clarity.
	POLARIZED SMOKE LENS 14% Light Transmission	Polarized smoke lenses provide the perfect all-around tint for bright light conditions. This popular lens color blocks sunrays without causing color distortion. The addition of a polarizing filter increases clarity by reducing glare.
	G-15 LENS 11% Light Transmission	G-15 lenses are perfect for maximizing transmissions of green and yellow light and providing a true to life color perception, resulting in reduced strain and a cooling sensation on the eyes.
	RED TINT LASER LENS 10.5% Light Transmission	Used to provide protection from Green, Blue, and Violet Lasers - 400-532nm OD4.54+ & 1064nm OD3.55
	ORANGE TINT LASER LENS 45% Light Transmission	Used to provide protection from Green, Blue, and Violet Lasers - 400-532nm OD3.43+ & 1064nm OD3.18

Protecting You With Standards

What is Standards?

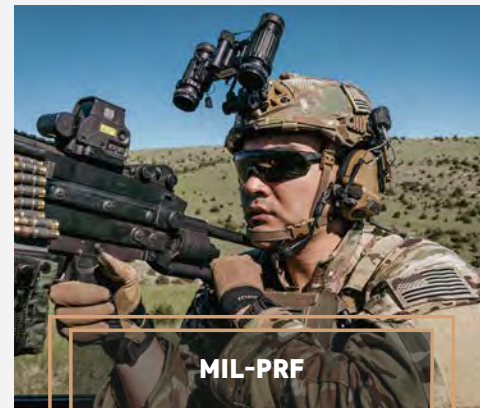

According to the CDC and Department of Labor, there are over 10,000 eye injuries in North America every day. Approximately 2,000 of these injuries require medical treatment and 3–5 days off work. Additionally, many are shocked to learn that 63% of all eye injuries happen away from work—at home and during recreational activities. To decrease these statistics, the American National Standards Institute (ANSI) and Military Combat Eye Protection Systems (MCEPS) created intense impact and rigorous optical tests to determine the quality and effectiveness of safety eyewear. Edge Eyewear glasses are independently tested by the accredited COLTS Laboratories for compliance with ANSI/ISEA, EN166 and MCEPS standards.

Safety Eyewear not needing the expansive Coverage of the higher standard, but still built with materials and engineering to accommodate the Optical and Impact ratings associated with ISEA/ANSI Z87.1 are identified with the Z87.1 markings.

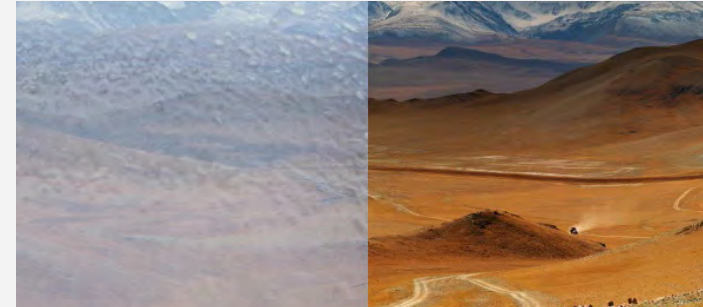

The most common set of accepted Safety Standards on jobsites, manufacturing, and industrial facilities is the “High Impact” (indicated by a + symbol) version of ISEA/Z87.1. The standard requires very thorough testing in the Optical Clarity, Impact Resistance, and the Coverage aspects of safety eyewear.

Glasses certified to this Military Standard are often nicknamed “Ballistic Rated” because of the extreme velocity of impact tests performed against the lens in addition to the peripheral tests of ISEA/ANSI-Z87.1+

Lens Technology

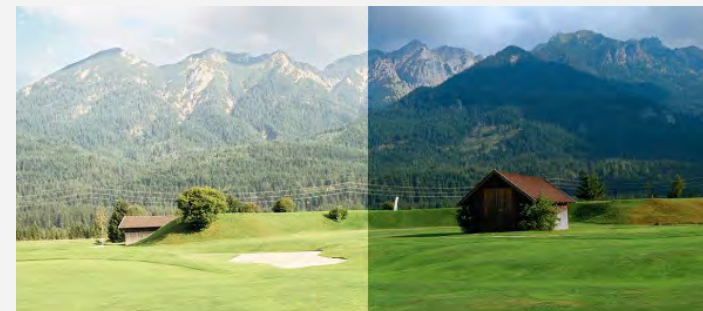

Vapor Shield Lens

The world’s first “Military Grade” Anti-Fog which is completely resistant to humidity, steam, fog and condensation in the most extreme conditions and temperatures. The result? Clear, pristine vision.

Tiger’s Eye Lens

By filtering out the short wavelengths in the “blue light” spectrum (which are difficult for the eye to focus) eye strain is dramatically reduced. Additionally, colors are vivid and enhanced, depth perception is increased, and contrast improved.

G-15 Lens

By maximizing transmission of yellow and green light in the middle of the light spectrum, these lenses dramatically reduce eye strain and create a cooling sensation to the eyes. As the lens choice of military and private aviators G-15 is perfect for a variety of bright light conditions and maintaining true-to-life color perception.

Polarized Filter Lens

Glasses certified to this Military Standard are often nicknamed “Ballistic Rated” because of the extreme velocity of impact tests performed against the lens in addition to the peripheral tests of ISEA/ ANSI-Z87.1+

Aqua Precision Mirror Lens

Aqua Precision lenses maximize visual clarity and contrast in bright light conditions. Instead of using a traditional “layering mirror on smoke” lens process, anti-reflective ions are infused into a clear lens resulting in a mirrored look AND maintains pristine clarity.

TACTICAL

Edge's tactical lineup represents advanced lens technologies, operator-focused frame features and stylish designs. Our collection of ballistic eyewear is third-party tested for compliance with both MCEPS and ANSI standards. From the range to the river, and the operation to the hunt, our tactical family of eyewear protects with distinct styles, comfortable fits and smart details.

SUPER 64

OTG + TPR

Goggle designs haven't changed much in recent years, so does that mean they don't need any improvement? We don't think so, and the Super 64-TPR is a perfect example of how we are improving the style of the low-profile goggle. Incorporating the key features you expect from Edge, we re-designed a new TPR (thermoplastic rubber) gasket that provides a closer fit and more protective seal around your eyes. This new gasket is easy to clean, long-lasting, and forms around various facial structures. Whether it's for the dedicated tactical officer or the airsoft enthusiast, Super 64-TPR will set a new expectation for your eyewear.
