AB

To My Secret UFO Disclosure Group

Why am I doing this?

I have been reading and following UFO stories since I was around 10 years old. At the beginning it was just like being involved in science fiction stories and movies. In grade 9 when we first did public speaking I did my first ever speech on the "Incident at Exeter", a famous UFO event. The class gave me a standing ovation and the English teacher asked me to do another speech for the next class. As I read more books I gradually began to believe that some of the stuff was true. The "Communion" series by Whitley Strieber really got to me - very scary alien abductions. The Betty and Barney Hill abduction has had several books including a recent one by two famous UFO investigators which has documented very persuasive evidence for this abduction. Since the release of the "tic-tac" videos by the Pentagon a couple of years ago my interest and readings have deepened. I am now becoming convinced that some of the most outrageous claims and stories are possibly true.

Think about this - if only ONE of the UFO and alien events is absolutely proven to be true - then it is true.

And now we have whistleblowers coming forward with the protection of Congress and new laws with hearings now taking place in the US. Even CNN is talking about the upcoming hearings. A dam is going to break and I think we are on the threshold of the most significant time in human history (as if we aren't already!).

In listening to some of the commentators I want to do my part in trying to communicate what has happened and what is going on. The UFO field is huge with many story lines, many hoaxes, many contradictions, and trillions of dollars driving some agendas. I want to try and simplify what the new "facts" imply because public education is a first step to acceptance of some of these new facts and their implications.

Most of you have heard about Roswell, one of the most famous UFO events. In July 1947 the Roswell Daily Record Newspaper headline was "RAAF (Roswell Army Air Field) Captures Flying Saucer in Roswell Region". This headline was based on a press release issued by the a senior officer in the Army at the base. As soon as more Senior Generals saw this they freaked out and immediately retracted the press release and had a media event to say it was a weather balloon. The officer who issued the press release, with the approval of the base commander, gave his deathbed confession that he was right. Back in those days there wasn't as much fuss about UFO's so the officer simply told the truth at the time without realizing what a sh—storm he had unleashed. And so the coverup process began.

I propose to send you information updates about this issue. Obviously you can delete or ignore them - just let me know to take you off the list. If you have family members or friends please pass the notes along to them or give me their emails.

I also plan to try and explain how everything fits together such as (please note that these will just be my own personal interpretations of what others are saying):

- who are the aliens?

- what are their characteristics?
- what is their interest in humans, why are they here?
- how can they travel the long distances?
- what energies and physics are involved in their travel and craft?
- how climate change is involved?
- how has everything been kept secret and covered up since the 1940's?
- why don't the aliens just tell us about themselves?
- are there really manmade UFO's?
- who are some of the crazier Ufologists and are they right about anything?
- why is the UFO community split into at least two major factions?
- any questions that you have

I suspect that in the next year you will start to hear more people talk openly about this.

I will end this note with another whistleblower video which is very compelling. This video and the one in my first email get very emotional as you hear about the trauma these events have caused and the personal safety risks that these individuals experience. Caution - another armed forces language warning.

I will continue these updates to gradually tell the whole story and as information comes out.

Still crazily yours,

Alan
