AB

Hi All

I have been pondering the future of these updates and I feel that I am now at the end of a phase. I could carry on and provide more details about all of the concepts and ideas that I have shared with you about the UFO phenomenon but it wouldn't really add a lot.

By now you are either a believer (full, partial), on the fence but will still consider it, skeptical but waiting for definitive "proof" or skeptical and will never believe it.

Not surprisingly I am in the believer camp and I feel that in the next one or two years information will come out that will convince everybody other than the last skeptical group mentioned above.

So, I am going to sit and wait it out for the next round of convincing disclosure examples if and when they come.

Here are examples of potential big future events that I will react to:

- first hand public testimony by a whistleblower accompanied by independently verifiable evidence (vehicles, materials, biologics, non-hoaxed pictures and videos)
- government police force (FBI or other) search of underground installations seizing verifiable evidence as above
- group disclosure by some of the senior leaders who are insiders to the covert secret military industrial complex that is behind the cover up since the 1940's - similar to

that is behind the cover up since the 1940's - similar to the whistleblower example but far more in depth

- ok, ET's landing at the White House and doing a press conference
- something else amazing
- if any of the above happens I probably won't need to update you about it because, by definition, the whole world will see and acknowledge it

The one thing that bothers me about getting definitive evidence is the advanced state and future progression of our own technology including a combination of robotics, AI, drones, synthetic biological hybrid entities, and other things that look real but aren't. As we know our civilization is no longer about the truth but about what you want to believe by using misinformation and technology to prove that your truth is real. Donald Trump is a weak example of this. His evidence is so ridiculous yet he has got 50% of the people in the greatest and most advanced nation on Earth believing his truth. We are at a tipping point. So, when a whistleblower or others come forward with the kind of evidence referred to above can we really believe that any of it is 100% true?

For now my best description of the UFO phenomenon is:

- ET's have existed throughout the universe over the last 14 billion years
- ET's have been coming to Earth since prehistoric times and may have had a role in developing human DNA and likely misinterpreted as "Gods" by ancient civilizations
- ET's are sentient, but not necessarily human, entities
- ET's exist in the same 3D world and experience time as we do, BUT
- ET's can communicate and travel in transdimensional space using laws of physics that are currently way beyond our current understanding

beyond our current understanding

- ET's can extract unlimited energy from the quantum fabric of space called zero point
- ET's are advanced spiritual beings and are peaceful
- ET's can and may directly affect our use of nuclear weapons not only to save humans from self destruction but also to prevent disruptions to the fabric of time and space that affect all ET civilizations from scalar waves that nuclear explosions trigger
- ET's are not infallible (just as we are not) and some of our technology can harm them
- ET vehicles (UFO's) exist in transdimensional space and can appear to humans as small metallic balls or orbs of light, or streaks and flashes of light, changing shapes but when they materialize fully in our 3D world they are solid and can appear in many fixed shapes - the classic saucer, pyramids, triangles, cigars, cylinders, tic tacs, spheres - they can be the size of several football fields and aircraft carriers (as in the Phoenix Lights episode)
- ET's and all sentient beings are connected to each other through the field of cosmic consciousness (as per my last update #23) and can communicate with us telepathically if they so choose
- man has retrieved crashed UFO's since the 1940's, some ET bodies have been retrieved, we have successfully reverse engineered some of the technology
- the power of the knowledge and technology that the military industrial complex has learned from ET's combined with the trillions of dollars of "old" energy investments that are at risk of devaluation has led to a small (several thousand globally) but powerful group being able to keep control of the information although it has been leaking out for decades and will emerge fully in the next few years

I am happy to engage in discussions with anyone about the topics that I have raised so far but for now I will pause these updates until there is more significant “Breaking News”.

All the best,

Alan
