

POWERFUL PERFORMANCE STARTS WITH A POWERFUL PARTNERSHIP

Star Plastics is partnering with LATI, a European manufacturer of engineering thermoplastics, to enhance both companies' specialty product lines and extend new solutions to North American customers seeking high-performance engineering-grade plastics. Whether you are looking to enable complex, lightweight designs, improve thermal management, or boost reliability or efficiency, the innovative materials and deep technical expertise of both Star Plastics and LATI can help you meet your key performance challenges.

LATI MATERIALS MADE FOR YOU BY STAR PLASTICS:

Diversified Product Offerings Enable Your Success

With a complementary product offering and shared focus on creating solid partnerships with customers, Star Plastics and LATI can help you transform your concepts into reality. Material grades include fire-retardant, lubricated, antistatics and highly conductive materials, as well as various grades with pre- and post-consumer recycled content. From specialty color to unique UL requirements, our knowledgeable team works with you to design the ideal material for your application.

LATI MATERIALS MADE FOR YOU BY STAR PLASTICS:

Our robust portfolio of engineering-grade materials is backed by an experienced, highly qualified team to assist you in all phases of your project. Meet all material needs with one North American supplier and the local, responsive customer service of Star Plastics. Services include:

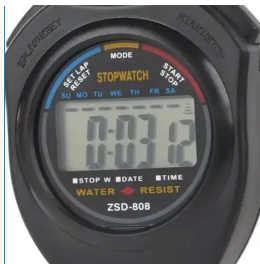

**CUSTOM COLOR
MATCHING**

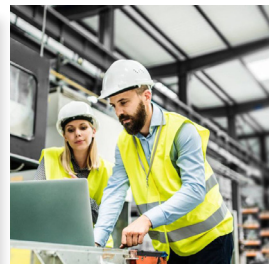

**MATERIAL PROCESSING
SUPPORT**

**EXTENSIVE QUALITY
TESTING**

**RELIABLE, QUICK
TURNAROUND**

**SUPPORT &
TROUBLESHOOTING**

STAR PLASTICS: TRUSTED, QUALITY PRODUCTS, EVERY TIME

- 30+ years in plastics formulation, processing and compounding
- In-house, full-service labs at each facility
- 98.71% on-time delivery and short lead times
- Custom color capability
- Reputation for lot-to-lot consistency

LATI: HIGH PERFORMANCE COMPOUNDS, SPECIALIZED TECHNICAL SERVICES

- Independent compounder with widest range of products in Europe
- One of the most qualified suppliers of self-extinguishing compounds in the world
- 30 years' experience in injection molding, machines and molds

FEATURED APPLICATIONS

Our engineers can formulate the right thermoplastic compound for your application – one that meets regulations, achieves optimal processing and moldability, and provides the performance you expect.

**ELECTRICAL/
ELECTRONIC**

Engineered materials for complex electrical components to meet today's demanding requirements for connectors, relays, switches, terminal blocks, bobbins, cable glands and LED lighting components

AUTOMOTIVE

High-performance applications for under-the-hood, exterior, chassis underbody, autonomous and connected vehicles, and electric vehicles and charging technology

**HOUSEHOLD
APPLIANCES**

Advanced polymer technology for enhanced aesthetics, parts reduction, total unit cost reduction, and built-in strength and functionality

LIGHTING

High-performance, high-temperature, high-impact-resistant engineered materials for parts reduction, sleek designs, and structural and functional integrity
