## GENERAL INFORMATION:

Three major health problems in cattle, sheep and goats, especially calves, lambs and kids are the following:

- 1: Gastric problems, like Cryptosporidiosis and Enterotoxemia.
- 2: Bacterial blindness
- 3: Infected open wounds

**Culmen Kombi** is able to treat all of the above simply and rapidly the way nature intended.

## PROTOCOL FOR GASTRIC SICKNESSES:

- 1: Shake the **Culmen Kombi** bottle well prior use.
- 2: Mix **Culmen Kombi** with tap water at a dilution rate of 3%. Example: 1 liter of water with 30 grams of **Culmen Kombi**.
- 3: Mix well and let it stand for a period of 15 minutes to activate.
- 4: Application can be applied with an Agricultural Dose Gun:
  - a) For lambs 15 ml of **Culmen Mixture**
  - b) For calf's 30 ml of **Culmen Mixture**
- 5: If the calf or lamb are too weak to stand, use a plastic syringe without the needle to spray into the animal's mouth.

It is important to ensure that the animal swallows the **Culmen Mixture**, to ensure this, place two fingers on the tongue, press the tongue down while spraying at the back of the throat, thus ensuring that the product is not going to the lungs via its respiratory tract.

- 6: A single application should be sufficient, multiple doses can be given without risk.

## **PROTOCOL FOR BACTERIAL BLINDNESS:**

- 1: Mix a 3% solution with **Culmen Kombi** and water, shake the bottle well prior usage. One drop of **Culmen Kombi** to two table spoons water.
- 2: Place the above **Culmen Mixture** in a spray bottle.
- 3: Wait 15 minutes before spraying to allow the mix to activate.
- 4: Spray gently over the infected eye and immediate surrounding area. Wet the area lightly.
- 5: Skip one full day and re-apply as per above the next day There is no need for further applications.

The above treatment is painless and least stressful for the animal, results are

within the first twenty-four hours, full recovery within four days.

## **PROTOCOL FOR OPEN INFECTED WOUNDS:**

- 1: Mix a 3% solution with **Culmen Kombi** and water, shake the bottle well prior usage.
- 2: Place the above mix in a spray bottle.
- 3: Wait 15 minutes before spraying to allow the **Culmen mix** to activate.
- 4: Spray gently over the infected wound and immediate surrounding area. Wet the area lightly.
- 5: Skip one full day and re-apply as per above the next day. There is no need for further applications.

## **CONCLUSION:**

**Culmen Kombi** is a simple and practical solutions for the above mention regrettably common problems faced in animal husbandry.

The product is extremely gentle on the animal reducing the usual stress by the animal encountered when in pain and in need of treatment.

There are no side effects when using the **Culmen** range of products.
