

## Culmen Trough

### **PREAMBLE:**

Farming is a complex activity; farming animals can be a greater challenge.

To facilitate this task a special formulation was created to avoid the use of a multitude of products when serious animal health issues occur.

Following in the path of our **Culmen** range we added **Culmen Trough** which addresses a variety of sicknesses described below in a single bottle.

## GENERAL INFORMATION:

Three major health problems in cattle, sheep and goats, especially calves, lambs and kids are the following:

- 1: Gastric problems.
- 2: Cryptosporidiosis.
- 3: Enterotoxemia.

**Culmen Trough** can treat the above simply and rapidly the way nature intended.

## APPLICATION PROTOCOL:

Applying **Culmen Trough** in drinking water allows large scale preventative sickness action.

- 1: Shake **Culmen Trough** well.
- 2: Pour 1 Kg **Culmen Trough** into 5 liters of water
- 3: Mix for one minute by hand or with a stick
- 4: Pour the above into 1000 liters of water

**NB:** Once **Culmen Trough** is mixed with water, the product activates. The mixture needs to be used within seven days.

5: If a large tank is used for filling several troughs, you can mix the product in the main tank, provided you use the mixture within seven days.

Always keep the ratio of 1 Kg of **Culmen Trough** for every 1000 liters of drinking water.

6: Apply the above every fifteen days for best results.

## **Application for Chickens**

As chickens do not drink liquids that are sweet.

The application requires a maximum dilution rate of 0.1% of **Culmen Trough**. In 5Kg of drinking water mix 5grams (One Teaspoon) **Culmen Trough**.

**NB.** Replace the mixture every 7 Days

## **CONCLUSION:**

Culmen Trough will also keep the water free of pathogens due to its natural composition which is detrimental to pathogens and gastric sicknesses.
