Distraction Index Chart:

CAVALIER KING CHARLES SPANIEL

BREED STATISTICS: This interpretation is based on a cross-section of 403 canine patients of the CAVALIER KING CHARLES SPANIEL breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.36 - 0.82) for the breed. The breed average DI is 0.58 (solid square). The patient DI is the solid circle (0.49).

SUMMARY: The degree of laxity ($DI = 0.49$) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a mild risk to develop hip OA. **No radiographic evidence of OA for either hip.**
