

SERMORELIN PLUS

G R F 1 - 2 9 / I P A M O R E L I N / G L Y C I N E

Sermorelin Plus has all of the benefits of Sermorelin plus the added benefits of Ipamorelin and Glycine. Ipamorelin is a synthetic pentapeptide, a selective agonist of the ghrelin/ GHS receptor pathway. Ipamorelin selectively binds the GHSR-1a receptor in the brain. This interaction with GHSR-1a leads to a GH release from the pituitary gland, influencing several anabolic processes, including appetite regulation, fat processing, and overall energy usage. Studies have shown that Ipamorelin can be found in the gastrointestinal tract, heart, lungs, kidney, pancreas, liver, immune cells, and adipose tissue. Glycine is one of the stimulatory agents inducing the pituitary gland to secrete HGH.

- Improvements in wellbeing and libido.
- Augmented restful sleep leads to better cognitive functions.
- Refined skin tone with stronger hair and nails.
- Decrease in mean systolic blood pressure.
- Improvement in fat loss and lean mass gains.
- Increased endurance and strength.
- Significant increases in GH release two hours after administration.
- Elevated mean 24-h GH, peak GH amplitude, and GH area under the peaks.
