

Advances in Medicine - style 3		
Scene	Voiceover	Visuals
1	Research and technology in medicine is advancing faster than ever.	Researchers, experiments,
2	Revolutionary Technologies are driving healthier outcomes.	Medicine/research/discovery
3	Breakthroughs in non-invasive medicine are happening faster and faster every day.	Medicine/research/discovery
4	Advances are being made in biometric scanning and other non-invasive techniques and equipment.	Biometrics, scanning, MRI
5	Over the years, linear accelerators have become 20 times more powerful.	MRI, x-rays/charts
6	The newest generation of machines enable more sophisticated tracking, with scans that are more controllable, more directable, and more precise, enabling pinpoint radiation delivery. This significantly minimizes the number of treatments required, and results in fewer side effects, and faster and more comfortable care.	MRI, controls ("Directable, controllable"); studying results
7	This all leads to better outcomes, and better overall patient care.	Patient consults, results
