Bill Caskey & Associate
Corona del Mar, CA

This exhibit was constructed within the iconic geodesic cube off hwy 5. An inverted pyramid steel structure was created to support the exhibit platform off the single base node of the cube. An 80' tall steel rocket gantry was erected within the cube to hang a 9 ton Rocketdyne Delta Rocket RS-68 booster engine. In addition to the Blast Off Zone created below the engine, other interactive exhibits included both air & water powered bottle rockets, a Nozzle Chamber and a Rocket Fuel Station.
