

LAC/USC Medical Center Chiller Plant Los Angeles, CA

Owner

County of Los Angeles. PW Dept
Los Angeles, CA

Architect

Perkins Eastman
Los Angeles, CA

This project was placed next to the iconic 1920's county hospital building. It consisted of the installation of a 1,600-ton multi-module chiller plant built on a micropile-supported concrete mat slab and concrete enclosure walls topped with a decorative steel screen. The project included site chilled water distribution and tie-in to existing hospital buildings and a new electrical substation. An above-ground water quality filtration system was also included.
