## **MARINE PAINT**

**Crystal Marine Paint is a quick drying polyurethane that can be brushed rolled or sprayed onto exterior and interior surfaces .**

**May be painted onto most solid surfaces, remove all loose particles, dust and oils and sand off to a solid surface. As most boats have already been painted previously, we strongly recommend that you try a test patch first to check that your preparation is correct for the surface. If you don't know what has been applied before and it is best to check first.**

**Timber - Bare timber should be sealed with the appropriate primer.**

**Fiberglass - Should be sanded back to a solid surface and can be painted without a primer again, please try a small test patch first.**

**Steel - Bare should be primed with Crystal red or grey oxide primer.**

**Aluminum - May be painted after sanding. Use an etch primer on new bare aluminum. Old aluminum may be painted straight on after sanding.**

- **Coverage is approximately 9 -12 square metres per litre depending on the application.**
- **Marine paint can be easily sanded and we recommend a fine sanding between coats.**
- **For thinning and cleaning up use only mineral turps.**
- **Recoat time 2 - 4 hours depending on weather conditions. Best finish leave 12 to 24 hours between coats with light hand sand (240 Grit)**
- **Spraying - only use clean mineral turps for thinning down and only use enough to get the marine paint to go through the spray gun.**
- **Do not paint if temperature is less than 12°C**

**IF YOU ARE UNSURE ABOUT ANYTHING TO DO WITH THIS PRODUCT DO  
NOT USE IT AND CONTACT YOUR CRYSTAL STOCKIST OR THE FACTORY  
DIRECT**
