

LETTER OF NOTIFICATION

Date: February 22, 2019

Re: Proposed Lake Management Program – Glen Lake

The Town of Queensbury has applied with the NYSDEC to use the aquatic herbicide Chinook in the spring or summer of 2019 to control Eurasian Watermilfoil in areas of the lake, thus improving water quality conditions as well as recreational and aesthetic values. The Town will use funds obtained through the Glen Lake Aquatic Plant Management District to acquire the permit and contract for an aquatic herbicide application for Glen Lake. The Program will be conducted under the supervision of NYSDEC certified personnel with the lake management firm SOLITUDE LAKE MANAGEMENT, NYSDEC Pesticide Business Registration No.16505. A NYSDEC permit application has been submitted for approval for the application of the herbicide Chinook. It is anticipated that spot treatment applications will take place sometime between May 1st and June 1st. Notification of the actual date of the treatment will be submitted to the Town and NYSDEC 7 days prior to application and will be posted along the shoreline on the day of the application. The roads along the lakeshore will be posted at the time of the treatment indicating applicable water use restrictions. The water use restrictions will be in effect for the duration of the treatment PLUS the timeframes indicated in the table below. The timeframes start as soon as the treatment has ended.

Water use restrictions are as follows:

Product	Swimming/ Bathing	Fishing	Animal Consumption	Potable Uses	Irrigation
Chinook	During Treatment and 24 hrs after	None	None	< 50 ppb*	100 ppb** or 21 days

* Do not exceed 50 ppb endothall or 2,4-D concentrations in potable drinking water at the time of consumption.

**If treated water is intended to be used to irrigate or mix sprays for plants grown in commercial nurseries and greenhouses; and other plants or crops that are not labeled for direct treatment with 2,4-D, the water must not be used unless one of the following restrictions has been observed: i. A setback distance from functional water intake(s) of greater than or equal to 600 feet was used for the application, or, ii. A waiting period of 21 days from the time of application has elapsed, or, iii. An approved assay indicates that the 2,4-D concentration is 100 ppb (0.1 ppm) or less at the water intake.

The product label is available for review on Solitude Lake Management’s website <http://www.solitudelakemanagement.com/product-labels-new-york>. In the event that you as a riparian owner or vested riparian user have any questions or objections to the proposed aquatic plant management program or water use restrictions, please contact the following agency within 21 days of receipt of this notice. Your objection must be in writing and demonstrate that your use of water will be significantly adversely affected (per the NYSDEC’s policy). Lack of comment will be considered consent to the treatment and water use restrictions.
