

Glen Lake Protective Association

June 2020 Newsletter

Dear Glen Lakers,

I do not feel we can schedule our June Membership meeting. Fortunately, let's be thankful that we have full use of our beautiful, clean lake and take full advantage of it. I'll try and keep everyone up to date.

MILFOIL Treatment -The tentative dates for treatment are the 5th of June and a second treatment on the 15th of June. The **WATER RESTRICTIONS** will be posted shortly on the GLPA website at www.glenlakeny.org. Please review them. Later in the summer we will have four weeks of hand pulling. As you all may notice the lake is in better shape than the same time last year with regard to milfoil. What you can do to help prevent the spread of eurasian milfoil ? Stay out of and away from the milfoil buoys. Check your propeller and clean it of any milfoil debris.

MEMBERSHIP - It's that time of year. Please support the Glen Lake Protective Association by renewing your membership. Membership supports our ability to protect the lake and keep it clean. If you have any questions about membership please contact Linda Clark or myself.

SAFE BOATING - Please, no faster than 5 MPH within 100 ft. of shore. Please keep your distance from fishing boats. Have fun as safely as you can. Remember, SOUND travels over water. Have fun responsibly but

we don't want to feel forced to be at your party! Show courtesy to all of your neighbors with regard to sound and music.

SEPTIC TANKS - Thank you to all of our lake resident who have installed or are installing new septic systems. We appreciate your direct contribution to keeping the lake clean. Remember to pump out your septic tank as needed.

STORMWATER RUNOFF POLLUTION is a significant threat to Glen Lake. A naturally vegetated buffer is a good management practice that can mitigate stormwater carrying nitrogen and phosphorus pollution into the lake. The Warren County Soil and Water Conservancy can help you to make your property better from a stormwater runoff standpoint. They will site visit your property with ideas for shrubbery ,plantings, erosion control, etc., depending specifically on your properties angle from the sun, type of soil, grade of your property and owner's preference. They do not charge for their services. They are not a regulatory agency. Contact Bob Bombard or Nick Rowell with questions on how to prevent stormwater runoff. Do your part to protect our lake. Call them at 518-623-3119.

Thank you for your support of the GLPA and for doing your part to keep our lake clean and the recreational jewel that it is. If you have any questions or lake issues you would like to discuss please contact me at - pmcphill@nycap.rr.com or 518-791-6779. Stay safe and enjoy the lake, Paul McPhillips, President GLPA.
