

Strategic Partnership Opportunity in Surgical AI & Spatial Computing

Global Surgical AI Healthcare is building the next generation of AI-powered surgical training and operational platforms using Apple Vision Pro and immersive computing.

As we enter our commercialization phase, we are now seeking **two strategic partner companies** to work directly with our executive team to scale:

- ✓ Enterprise hospital partnerships (U.S. & international)
- ✓ Commercial sales and business development
- ✓ Web3 / Bitcoin transaction infrastructure
- ✓ Strategic capital and equity placement

What We're Offering

Selected partners will participate in:

- **Preferred equity** in Global Surgical AI Healthcare
- **Performance-based cash compensation** on closed deals
- Long-term strategic positioning in a category-defining healthcare platform

We are intentionally limiting this to **two partners** to ensure focus, alignment, and meaningful economics for everyone involved.

Go-To-Market

Our initial programs are in advanced planning and pre-production. Early hospital partners will be able to **secure priority access through pre-sale agreements** with delivery scheduled approximately six months later, in exchange for early commitment incentives.

Revenue from early agreements will directly accelerate platform development and deployment.

Operating Model

Partners will lead marketing and sales execution in close coordination with our executive team, under mutual NDA and non-compete agreements.

The Vision

We are building a serious platform at the intersection of **AI, immersive computing, and surgical medicine** — with a clear commercial roadmap and institutional-scale ambition.

If your firm has deep experience in:

- Healthcare enterprise sales
- International hospital partnerships

- Strategic capital formation
- Or Web3 infrastructure

...I'd welcome a conversation.
